volunteer opportunities

Volunteering at the Center is a great way to make a difference while engaging with the local horticultural and agricultural community. While volunteering at Cloud Mountain, you can expect to gain hands-on education while meeting new people and working in our beautiful setting.

Interested? Contact us! Looking to volunteer as a large group or corporate party? The more the merrier!

Please contact the Center for more information at 360.966.5859.

gift cards

Cloud Mountain gift cards make a great gift for the garden enthusiast in your life! Available for purchase online or by phone. Gift cards are redeemable online or at the Center.

shipping plants

We ship from February 15 through mid-April, and again in early October, weather permitting. We will only ship when we feel confident that the plants will arrive in good condition. Some plants have very restricted shipping seasons for that reason. When we confirm your order, we will try to specify the ship date that we feel is best. We do not cold store plants. If you are in the Midwest, on the east coast, or in Alaska, we may not be able to ship you dormant plants during your prime planting season.

Why is shipping so expensive? We ship USPS priority mail, and shipping is calculated by the USPS zones. Although it is expensive, by shipping Priority Mail, we can be sure the plants arrive quickly and in good shape. Fruit and nut trees often ship in boxes that are 60" x 8" x 8". These boxes are oversized and considered 20 lbs, no matter how light they are, and in zones 4-8 also incur a balloon charge. We ship to all states within the U.S., limited by weather and each state's agricultural restrictions. At this time, we do not ship to other countries.

growing together

This past October, we celebrated the 30th annual Fall Fruit Festival! With over 1800 visitors coming out to the farm throughout the weekend, it's always a refreshing reminder of the impact of the work in the community - connecting us all to food, our sustenance, and each other.

For over 40 years, we've worked hard to increase the diversity of fruits and plants grown in our region, educate new farmers to home gardeners, and made efforts to contribute to a healthy local food system and healthy, sustainable gardens.

AND - you are a part of it! We'd love for you to know how your purchases of nursery plants, trees, and produce affects our work, and the effectiveness of the programs we provide in the community.

Read on the next few pages to find exciting updates and brief overviews of our various educational programs, their impacts, and how to get involved.

We are humbled to continue this work as a non-profit farm center - educating our community about how food is grown and raised, and supporting new farmers in the important journey to launch viable operations.

Thank you for your continued support and for eating from our place in the world.

"It's a sense of place that connects us all. From the seed in the ground, to the harvest of the fruit, to our communities' plates, restaurant menus, and back to the earth. This sense of place, and protecting our farmland and communities is what Cloud Mountain is all about."

~ Cheryl Thornton, Co-Founder

community building and education

every dollar you spend at the farm center supports:

- New farmers in growing successful businesses.
- Training farm interns and providing incredible diversity of experiences from business training to fruit, vegetable, and nursery production.
- Being a resource for everyone to become a “grower” in their own backyard.
- Supporting our community in knowing their farmer, where their food comes from, and just how important it is to eat local first.

growing information

Our mission includes education, and we have a wealth of informational handouts on growing fruit and ornamental plants available on our website and at the Center. If you're looking for information on pruning apples or information on disease management, there's a handout for that.

providing education and resources

Connecting our community to local plants, farms & food

• Growing plants for our region

We are regionally recognized for our fruit and ornamental plants and staff expertise, growing nearly 75% of the plants we sell, and offering over 600 varieties!

• Community Workshops

Our knowledgeable nursery staff teaches home gardeners how to grow food sustainably and create landscapes that are environmentally friendly.

• Educational Events

From the annual Fall Fruit Festival to the Whatcom County Farm Tour, Eat Local Month, and community cooking demos, we are passionate about educating our community.

Resources to find local farms + food

We love making it easy to find local food. Check out the online Eat Local First Food Atlas (www.eatlocalfirst.org/atlas), and pick up a copy of the Food & Farm Finder or Farm Share CSA List.

training new farmers

Growing a sustainable food system from the ground up, starting with the next generation of farmers

Internship program

Our 7 ½ month, full-time paid internship teaches essential agricultural production management skills through an integrated classroom and hands-on curriculum. In a recent survey of intern alumni, 80% of respondents are still farming.

Many thanks to the Whatcom Community Foundation and the Sustainable Whatcom Fund for their commitment to building strong community and healthy local food systems.

Incubator Program

Supporting new farmers with leasing land, shared infrastructure and equipment, and expertise.

Food To Bank On

Our beginning farmer business training program, supporting new farms in growing their businesses; and connecting to mentors, markets, and food banks.

expanding markets for local farmers & food businesses

Creating relationships to bring more local food into the marketplace

Connecting producers with buyers

We connect local chefs and food buyers with local farmers and food producers through an annual Farm-to-Table Conference, farmer /chef meet-up events, and Chef Farm Tours throughout the year.

Eat Local First

Our trusted program for finding local farms & food, and identifying the restaurants, markets and food businesses that support them. Find the fork to stay connected to businesses that commit to providing you the freshest local products.

Puget Sound Food Hub Cooperative

As the northern aggregation site for the Food Hub, we provide local farmers with convenient, efficient access to regional markets.

We grow over **200 varieties** of fruits & vegetables

Find our produce at the Bellingham Farmers Market, local restaurants, grocers, and institutions in the greater Puget Sound area.

Popular items include apples, aronia, cherries, currants, grapes, kiwi, Asian pears, European pears, peaches, melons, plums, tomatoes, peppers, and more! Visit our farm to learn more!

2020 community workshops

Workshops are held on Saturdays. Check full workshop descriptions for times. Reserve your spot today by registering online at cloudmountainfarmcenter.org. **Indicates registration required.*

DATE	TIME	CLASS NAME

Whatcom County Farm Tour Saturday Sep 12 & Sunday Sep 13

The keystone event of September Eat Local Month—the Whatcom County Farm Tour—is a free, self-guided tour of a selection of Whatcom County’s diverse and innovative farms. Load up the car or hop on your bicycle for the chance to meet your local farmer and taste the flavors of our region from cheeses to fruits, vegetables to specialty products, and more. Each stop has educational on-farm activities and is fun for the whole family

31st Annual Fall Fruit Festival Saturday Oct 3 & Sunday Oct 4

Join us in celebrating the fall season! Come experience the farm first hand with your family and friends and savor the bounty of our region. This family-friendly event features tastings of over 200 varieties of fruit, all grown here on the farm. Enjoy live music, kids’ activities, a u-pick pumpkin patch, and local food, including ice cream flavors made from Cloud Mountain produce. Your attendance and admission fee support the Center’s crop research, community education, and new farmer training—thank you!

workshop details

At Cloud Mountain we are passionate about learning. We offer the community a variety of workshops on topics ranging from basic food gardening to advanced fruit-tree care. Many of our workshops take place outside in the demonstration gardens and fields to provide real-world examples and hands-on guidance. Please come prepared for the weather—even our indoor seminar space can be on the cool side.

Most workshops are \$15 per person. Our advanced classes are more in-depth and hands-on, and range from \$50 for a session, to up to \$90 for a series. Scholarships are available upon request; no one will be turned away based on ability to pay. Please register for classes on our website or by phone at (360) 966-5859 x 3.

GROWING FRUIT

Learn to Grow Fruit Trees

If you're thinking about planting fruit trees, but don't know where to start, this is the workshop for you. You'll learn about the easiest varieties to grow, how to decide which rootstock to plant, where and how to plant, and what initial pruning and training are needed. You'll leave knowing how to give your trees the best start in the first 3 years. Be prepared to be outside. \$15 per person. Registration recommended.

Feb 15
10:30am-
12:30pm

Growing Apples and Pears: Working with Larger Rootstock Trees

Are you interested in growing apples and pears? This class will cover growing techniques and pruning methods for apple and pear trees. The techniques covered will help you to keep your trees healthy and productive year after year. In this session, the focus will be on managing semi-dwarf and standard trees. Be prepared to be outside. \$15 per person. Registration recommended.

Feb 22
10:30am-
12:30pm

Advanced Apple and Pear Growing (2-part hands-on course)

Part 1: This two-part class will take you beyond theory to enhance your skills as a fruit grower. In this first class, you'll be working in the orchards pruning established trees, with hands-on instruction. You'll practice applying pruning theory to trees grown on different training systems, and on trees of different ages. Expect to walk away feeling more confident when working with your fruit trees. To provide hands-on training, we limit the class size and offer two sections of the class, Feb 22nd or Feb 29th.

Feb 22
1:30pm-
3:30pm

OR

Feb 29
10:30am-
12:30pm

Part 2: In the second class in this two-part series, you'll learn about the process of scouting for pest and disease issues, and about how pruning in Part 1 has affected the early growth of the trees. You'll also learn about fruit set and participate in a hands-on thinning practicum. Both sections of 'Advanced Apple & Pear Growing: Part 1' will meet together for this class.

June 6
1:30pm-
3:30pm

Be prepared to be outside. \$50 for both Part 1 & Part 2. Sign up for both of our advanced courses—'Apples & Pears' and 'Stone Fruits'—for \$90. Registration required, space is limited.

Growing Small Fruits

Did you know that Northwest gardeners can grow an incredible variety of fruits and berries? This workshop will focus on techniques for growing small fruiting plants like blueberries, raspberries, blackberries, strawberries, and kiwis. Be prepared to be outside. \$15 per person. Registration recommended.

Feb 29
1:30pm-
3:30pm

Learn to Grow Organic Fruit at Home

You can grow tree fruits and berries using organic practices, even in our challenging climate. Learn how to keep your trees and berry plants healthy and productive. This workshop will cover the most common pest and disease issues in our area, and how to deal with them effectively. Other topics will include soil and weed management, and use of compost and mulches in fruit growing. Be prepared to be outside. \$15 per person. Registration recommended.

Mar 7
10:30am-
12:30pm

Growing Apples and Pears: Working with Dwarf & Mini-Dwarf Rootstock Trees

Are you interested in growing apples and pears? This class will cover growing techniques and pruning methods for apple and pear trees. The techniques covered will help you to keep your trees healthy and productive year after year. In this session, the focus will be on managing dwarf and mini-dwarf trees. Be prepared to be outside. \$15 per person. Registration recommended.

Mar 7
1:30pm-
3:30pm

Grow a Fruiting Wall: Espalier and Beyond

Fruiting Walls and Espalier training systems use a trellis system, and typically produce more fruit per square foot than conventionally trained fruit trees. We will cover various unique training systems for fruit trees that allow growers to maximize limited space while adding aesthetics to the garden. These training systems also make it easy to utilize disease-resistant varieties and insect nets that will allow for clean fruit at harvest. We will discuss apples, pears, cherries, plums, and peaches. The class will cover construction considerations, training, and which plants will succeed. **Be prepared to be outside.** \$15 per person. Registration recommended.

Apr 4
10:30am-
12:30pm

Growing Stone Fruits: Cherries, Peaches, Apricots & Plums

Growing cherries, plums, peaches and apricots can be both rewarding and challenging in our maritime climate. This workshop covers planting, growing techniques, and pruning of stone fruits. **Be prepared to be outside.** \$15 per person. Registration recommended.

Apr 4
1:30pm-
3:30pm

Advanced Stone Fruit Growing (2-part hands-on course)

Part 1: Do you still hesitate before you make a pruning cut on your plum or cherry trees? This two-part class will take you beyond theory to enhance your skills. In this first class, you'll be working in the orchards pruning established trees, with hands-on instruction. You'll practice applying pruning theory to trees of different ages. Stone fruits require special handling when pruning, and are pruned just as the fruit sets. To provide hands-on training, we limit the class size.

Apr 25
10:30am-
12:30pm

Part 2: In the second class in this two-part series you'll learn about the process of scouting for pest and disease issues, and about how pruning in Part 1 has affected the early growth of the trees. You'll also learn about fruit set, and participate in a hands-on thinning practicum.

Jun 6
10:30am-
12:30pm

Be prepared to be outside. \$50 for both Part 1 & Part 2. Sign up for both of our advanced courses—'Apples & Pears' and 'Stone Fruits'—for \$90.

Making Hard Cider

Are you overwhelmed with apples every year? Thinking about turning them into hard cider? This workshop is your chance to learn about hard cider production. You'll learn the basic procedures for juicing fruit and fermenting, including equipment needs, apple varieties and blends, yeasts and sanitation. And yes, you will get to taste some hard cider. \$50 per person. Registration required, limited space. Must be 21 or over to participate.

Sept 26
1:00pm-
3:30pm

GROWING GRAPES

Growing Wine Grapes

The Center has been conducting wine grape variety trials for almost 20 years, and developing different training systems to improve grape production. We want to share this information to help new and experienced growers. This workshop will provide you with an overview of how to grow wine grapes in our cool climate. You will learn about cultural practices including soil requirements, pruning techniques, pest management, and harvesting. The workshop will take place in the vineyard. **Be prepared to be outside.** \$15 per person. Registration recommended.

Mar 14
10:30am-
12:30pm

Growing Table Grapes

For the past few years, the Center has been conducting trials on different training systems for table grapes and we are seeing very impressive results. Join us for this workshop and learn how to grow table grapes successfully. You'll learn about trellis design, pruning and training, and about fertility and pest management methods. We'll also discuss varieties that work in our cool summer climate, including some new, just released varieties. **Be prepared to be outside.** \$15 per person. Registration recommended.

Mar 21
10:30am-
12:30pm

Summer Care in the Vineyard

This workshop walks you through best practices for managing your vineyard in the hot summer months. The class will cover shoot positioning, summer pruning, bunch thinning, water management, and disease management. All of these techniques are critical to the production of quality grapes for eating and winemaking. **Be prepared to be outside.** \$15 per person. Registration recommended.

Jun 20
1:30pm-
3:30pm

GROWING VEGETABLES

Learn to Grow a Vegetable Garden

Do you feel overwhelmed at the thought of starting your first garden? Vegetable gardening can be fun and rewarding, however it involves more than just planting seeds. Learn how to successfully grow a wide variety of produce throughout the year, including how to get started, planning your plantings, managing your soil and fertility inputs, and timing for succession harvests. This class is also a nice refresher for those that haven't grown a vegetable garden in a while. **Be prepared to be outside. \$15 per person. Registration recommended.**

Mar 28
10:30am-
12:30pm

Sustainable & Edible Landscaping

Your garden can be both beautiful and productive. In this workshop, you'll learn how to draw pollinators and beneficial insects to your garden, as well as ways to integrate edible plants into a showy landscape. Expect to come away with the tools to grow and maintain your landscape in an environmentally friendly way. **Be prepared to be outside. \$15 per person. Registration recommended.**

May 2
10:30am-
12:30pm

Plant Your Winter Vegetable Garden Now!

Who doesn't love having fresh vegetables in the fall and winter? Here in the Northwest, it's possible to grow and harvest vegetables almost year round. For a successful winter garden, it is best to begin planning and planting during the peak summer season. In this class, you'll learn about the types of plants you can grow, special fertility and soil requirements for winter gardening, and the use of cloches and frost blankets to extend the harvest. **Be prepared to be outside. \$15 per person. Registration recommended.**

Jun 13
10:30am-
12:30pm

PROPAGATION AND OTHER CLASSES

Winter Propagation: Grafting

Propagation by grafting is a fun and satisfying way to create new plants. In this two-hour workshop, you'll learn how to propagate fruit trees and other woody plants during the dormant season using grafting. **\$50 per person. Registration is required.**

Mar 14
1:30-
3:30pm

Winter Propagation: Hardwood Cuttings

Propagation by hardwood cuttings may be the easiest way for the home gardener to make new plants. We'll look at materials needed, including media, tools and hormones, cutting preparation, and aftercare. **Be prepared to be outside. \$15 per person. Registration recommended.**

Mar 28
1:30-3:30

Summer Propagation: Softwood Cuttings

The skill of propagating cuttings is something every gardening enthusiast should have in their tool belt. If a few simple guidelines are followed, softwood and semi-ripe cuttings can be very successful. The summer season is one of the most effective for the propagation of many woody plants. We will discuss timing of cut, condition of wood, and caring for cuttings during and after the rooting process. **Be prepared to be outside. \$15 per person. Registration recommended.**

Jun 13
10:30am-
12:30pm

Plant a Pollinator Garden!

Come celebrate National Pollinator Week by learning to enhance pollinator habitat in your garden. By incorporating pollinator plantings, you can help increase the pollinator and beneficial insect populations, and help your own food production at the same time. **Be prepared to be outside. \$15 per person. Registration recommended.**

June 27
10:30am-
12:30pm

Summer Propagation: Fruit Tree Grafting by Chip Budding

Are you looking to expand your grafting skills? This two-hour course will introduce you to the basic principles of chip bud grafting. In addition to practicing the budding technique, you'll learn about knife use, rootstock/scion selection, and aftercare of new grafts. **Be prepared to be outside. \$50 per person. Registration required, space is limited.**

Aug 8
10:30am-
12:30pm

ongoing crop trials at cloud mountain farm center

Cloud Mountain has been doing crop trials for nearly four decades. Our goal is to evaluate fruit varieties and growing methods for production, improving disease resistance and ease of cultivation for both the home gardener and the small market farmer.

cherry trials

Sweet cherries are a challenge for a number of reasons, but early bloom and susceptibility to canker diseases are the most difficult to overcome. At Cloud Mountain, we have been evaluating growing methods that can help overcome these challenges.

UFO - Growing cherries on trellis systems has proven to have several advantages. First, the trees can be kept smaller and yet still are very productive.

covers - Covering sweet cherries with roofs or tunnels can help prevent canker disease by preventing frost damage in early spring. Overhead cover protects the cherries from rain splitting at harvest, and facilitates insect and bird netting.

peach trials

Cloud Mountain has been growing peaches since 1980. In the past 15 years, we've planted trials of both curl resistant and non-curl resistant peaches. Peach leaf curl is the disease that is the most difficult to deal with in our climate. If you want to grow peaches without spraying, you should look first to curl resistant varieties.

Frost - The variety with the longest track record, Frost has always been very curl resistant. Its flavor is consistently up there with any others in this class fruit. It is more susceptible to brown rot than other curl resistant varieties.

Avalon Pride - Fruit quality has firm, dense flesh, with a pleasing texture. It appears sensitive to canker diseases. Tree shows little bud damage in the spring from Brown Rot.

Salish Summer - Very disease free looking tree at bloom, in several years of observation Salish Summer shows the low amounts of brown rot in its buds or in the adjacent bark. It has a lighter bloom than most varieties and lighter fruit set in its first couple harvests compared to other curl resistant varieties.

Betty - Fruit quality has been superb, rich dense flesh that rivals any of the 16 non-leaf curl resistant varieties we have in our commercial trials. This fruit thinned properly is outstanding. Although we have produced only a few crops on the tree it really looks promising.

table grape trials

For the past decade, we have been experimenting with pruning and trellis systems for table grapes. We have also been growing some newer varieties with an eye to disease resistance, splitting resistance, and early ripening.

Training systems - Spur pruning along with overhead and curtain trellising have proven to be the most productive management tools in our trials.

variety trials - The past years have shown us that resistance to fruit splitting is the key to quality grapes at harvest. Four varieties stand out: Interlaken, Jupiter, Canadice and Neptune all can take rain without splitting.

what does 'hardy' mean?

For many plants in the catalog, we have listed how hardy the plant is. What does that mean? The USDA Hardiness Zones are based on **Average Annual Extreme Minimum Temperatures**. For most of Western Washington, our average extreme minimum winter temperatures are in the 10°F-20°F range, putting us into USDA Hardiness Zone 8. We can get colder than 10°F, but most years we don't.

These hardiness zones are only a guideline—plants that are not established may not tolerate as low a temperature as ones that are.

Even established plants can be damaged by cold winters, especially if the cold weather comes suddenly, before plants go dormant. Drought stress during the summer can also influence a plant's ability to withstand winter cold.

succeed with fruit trees

The fruit trees in this catalog are grafted—joining a fruit variety with a chosen rootstock

Why grafted?

- Fruit tree varieties do not come true from seed
- Fruit trees are difficult to root from cuttings
- Rootstock choice can influence size, soil tolerance and productivity

To create a new fruit tree, young wood from a desired variety is grafted onto the desired rootstock. Choose your rootstock. When deciding on what rootstock you want, keep in mind:

- Usually, smaller rootstocks will bear fruit earlier than larger rootstocks but require permanent staking
- Larger rootstocks are somewhat more tolerant of marginal soil and more drought tolerant once established
- Larger rootstocks can be grown to fruit above deer browsing

Plant your fruit trees in well-drained soil in full sun. Do not amend the soil heavily. You can add some organic matter—compost or rotted bark—up to 20% of the total soil in the hole. Plant your tree so the graft is 2"-4" above the soil when finished.

For a successful planting:

- Stake all fruit trees at planting. Trees grafted on dwarf and mini-dwarf rootstocks should have a permanent stake or be grown on a trellis system. A good stake should be at least 8' tall, with 18"-24" buried, about 6" away from the trunk and should be rot resistant: treated wood or metal.
- Trunks should be tied in at least two places with a material that will not girdle the trees, such as stretch tie. Fertilize young fruit trees in the spring, and apply lime in the fall.
- Young fruit trees are not drought tolerant—make sure they have adequate summer water. Trees on smaller rootstocks may always need summer water to produce quality fruit.
- Keep a weed and grass free zone around the tree, 3'-4' diameter in width.

fruit plants

apples

\$29.95

- Zones 5-9
- Great varieties, selected especially for Northwest gardens
- All varieties need a pollinizer
- 🍷 Triploid varieties do not pollinize other varieties
- Easiest to grow are 🍷 Scab-resistant and 🌿 Mildew-resistant
- Look for 🍷 for eating apples that are also good for hard cider

WILLIAMS PRIDE This selection is top quality for early apple season. The fruit is bright red with full bodied flavor, rare for early selections. Trees have good vigor and are heavy producers. Trees are immune to scab and somewhat resistant to mildew. Early season bloom. Ripens in early August. *Rootstocks:* M-27 & G41 mini dwarf, M-26 dwarf, 🍷

GRAVENSTEIN (Sheets Green strain) Very popular. Hard, coarse-textured flesh, excellent eating and superb sauce apple. Earliest bloom. Ripens in early September. 🍷 Triploid: will not pollinize other varieties. *Rootstocks:* M-26 Dwarf, M-106 semi-dwarf 🍷

AKANE Bright red apple has juicy, white flesh with wonderful grape-like flavor, superb eaten fresh or for baking. Hangs well on tree, very resistant to scab. Better keeper than most early fall varieties. Ripens in early September. Early to midseason bloom. Thin well for good size. *Rootstocks:* M-26 dwarf, M-106 semi-dwarf 🍷 🌿

RED ALKMENE A very good quality eating and multi-purpose apple. Crisp and juicy with an intense, distinctive sweet-tart flavor. Skin is bright red in color. The tree is compact and productive. Does not keep well. Hangs well on the tree; excellent home orchard apple. Early season bloom. Ripens in early September. *Rootstocks:* M-27 mini-dwarf, M-26 dwarf, M-106 semi-dwarf 🍷 🌿

PINK PEARL Early in September, these light yellow skinned apples ripen to sweet tart flavor and flesh that turns pink when cut. Great for pink applesauce or in salads. Does not keep well. *Rootstocks:* M-26 dwarf (pick up only) 🍷

ZESTAR! Another release from the University of Minnesota. Sweet with a bit of zing, crisp and juicy. Good storage potential for such an early apple. Early bloom. Ripens in early September. *Rootstocks:* G-41 mini-dwarf, M-26 dwarf, M-106 semi-dwarf

TSUGARU This mid-September ripening apple has a juicy, sweet caramel flavor, somewhat like the popular Fuji but richer. An annual favorite at our fall tasting. Midseason bloom. *Rootstocks:* M-27 mini-dwarf M-26 dwarf, M-106 semi-dwarf

QUEEN COX Cox are known for their world class flavor. This improved Cox selection produces well in cool summer areas. Stores one month. Medium sized, bi-colored apple. Blooms midseason. Ripens in mid to late September. *Rootstocks:* M-26 dwarf 🍷

HONEYCRISP Eating quality as the name suggests: very sweet flavor with a distinctive crunch. Trees are very productive. Large, well-formed fruits, 50-90% red stripe, and a favorite at our Fall Fruit Festival. Midseason bloom. Ripens in late September. *Rootstocks:* M-27 & G-41 mini-dwarf, M-26 dwarf, M-106 & G-210 semi-dwarf 🍷

FIESTA Cox's Orange Pippin x Idared. Easier to grow than many Cox types, this is a productive, disease-resistant cultivar with tangy, aromatic sweet flavor. Stores up to 6 weeks. Mid- to late-season bloom. Ripens in late September. *Rootstocks:* M-27 mini-dwarf, M-26 dwarf (limited), M-106 semi-dwarf 🍷

LIBERTY Beautiful long conical bright red fruits with a brightly tart flavor, hard breaking flesh. Fruit will store throughout the fall, best eaten within the first month. Trees produce heavy crops. Must be thinned to achieve size. Blooms early midseason. Ripens in late September. 🍷 Triploid: will not pollinize other varieties. *Rootstocks:* M-27 & G-41 mini-dwarf, M-26 dwarf, M-106 semi-dwarf 🍷 🌿

ELSTAR Scab resistant, vigorous tree that branches profusely. Fruit quality is excellent, crisp and juicy, with intense aromatic sweet-tart flavors. Fruit size is medium. Pick slightly green to store. Will store to December if refrigerated. Midseason bloom. Ripens in late September. *Rootstocks:* M-27 mini-dwarf, M-26, M-106 semi-dwarf 🍷 🌿

FREEDOM Scab immune. Fruit is crisp with intense sweet, tangy flavor. Very productive and vigorous. Keeps 4-5 weeks under good storage conditions. Late midseason bloom. Ripens in late September. *Rootstocks:* M-27

apple rootstock info

M-27 (Mini-Dwarf) Grows to 4'-6'. Compact and precocious—ideal for the home gardener with little space for fruit trees. Suitable for espalier, can grow in large containers. Permanent support required. Space 2'-4' apart.

G-41 (Mini-Dwarf) Tree will grow 6'-9'. Precocious and productive. Resistant to fireblight and replant disease. Permanent support required. Space 6'-8' apart.

M-26 (Dwarf) Grows to 7'-12'. Very productive and cold hardy; will not tolerate poorly drained soil. Requires staking in early years and may require permanent support in some situations. Space 7'-9' apart.

GENEVA 30 (Semi-Dwarf) Grows to 8'-12'. Extremely productive, resistant to replant disease and fireblight. Should be staked in early years. Space 8' apart.

GENEVA 210 (Semi-Dwarf) Grows to 10'-14'. Extremely productive, resistant to replant disease, fireblight, and woolly apple aphid. Needs staking in early years.

M-106 (Semi-Dwarf) Grows to 10'-15' and produces a well anchored root system. Precocious and productive, tolerating a wide range of soil conditions. Very cold hardy. Should be staked in early years. Space 10'-15' apart.

M-111 (Semi-Standard) Grows to 15'-20'. Tolerant of most soil types, and somewhat drought tolerant. Space at least 15' apart.

mini-dwarf, M-26 dwarf, M-106 semi-dwarf 🍷 🌿

NORTH POLE COLUMNAR APPLE A deep red, McIntosh type apple. Like other columnar apples, it will grow to 8'-10' tall, but stay only 3' wide. Midseason bloom. Ripens in late September. *Rootstock:* M-106 semi dwarf

SCARLET SENTINEL COLUMNAR APPLE Large yellow fruit with a deep red blush. Crisp and sweet with pure white flesh. Moderate disease resistance. Should mature at 10' high, 3' wide. Midseason bloom. Ripens in late September. *Rootstock:* M-106 semi-dwarf

BRAMLEY'S SEEDLING Classic English cooking apple; originated as a seedling, circa 1837. Very large apples, quite tart, excellent for cooking. Midseason bloom. Ripens in early October. 🍷 Triploid: will not pollinize other varieties. *Rootstocks:* M-26 dwarf, M-106 semi-dwarf 🍷 🌿

NEW! INTIAL® A midseason ripening apple with very crisp texture, high sugar and low acid fruit. Cross of Gala and Redfree. Immune

to scab. Triploid: will not pollinize other varieties. Developed in France. Propagation protected variety. *Rootstock: G-41 mini-dwarf* 🍏 🌱 🍷

JONAGOLD Considered one of the finest quality dessert and cooking apples on the market. Hard flesh, fine texture, rich full flavor. Large size, gold with red blush, very attractive. Vigorous tree, heavy producer. Midseason bloom. Ripens in early October. 🍏 Triploid: will not pollinize other varieties. *Rootstocks: M-27 & G-11 mini-dwarf, G-41 mini-dwarf, M-26 dwarf, G-210 & M-106 semi-dwarf (all pick up only)* 🍏 🌱 🍷

KARMIJN DE SONNAVILLE Cox Orange Pippin cross. A connoisseur variety with a very nice texture and intense flavor that mellows after one month of cold storage. Another festival favorite! Performs best in cool summer climates. Midseason bloom. Ripens in early October. 🍏 Triploid: will not pollinize other varieties. *Rootstocks: M-27 mini-dwarf, G-935 dwarf, G-30 semi-dwarf (all pick up only), M-26 dwarf, M-106 semi-dwarf* 🍏 🌱 🍷

PITMASTON PINEAPPLE Some resistance to scab. A small golden-yellow apple with sweet, nutty flavor having strong pineapple overtones. Keeps well. Good for eating, cooking, and cider. Thin well for size and to prevent biennial bearing. Very late bloom. Ripens in early to mid-October. *Rootstock: M-26 dwarf (pick up only)* 🍏 🍷

ANANAS REINETTE (Pineapple Russet) Heirloom apple with small to medium sized, russeted golden fruit, and intense, sweet, sharp flavor that develops pineapple tones when fully ripe. Stores into January. Midseason bloom. Ripens in early to mid-October. *Rootstocks: M-27 mini-dwarf (limited), M-26 dwarf, M-106 semi-dwarf* 🍏 🌱

GOLDEN RUSSET An antique variety, with golden brown skin and sugary, aromatic flesh. An excellent storage apple, good for sweet and hard cider. Very disease resistant, somewhat biennial-bearing habit. Midseason bloom. Ripens in early to mid-October. *Rootstocks: M-26 dwarf, M-106 semi-dwarf* 🍏 🌱 🍷

NEW! GALARINA™ A mid to late-season ripening apple with very crisp textured high sugar and low acid fruit. Cross of Gala and Florina. Excellent storage capability. Highly resistant to scab and mildew. Midseason bloom. Developed in France. Propagation protected variety. *Rootstock: G-41 mini-dwarf* 🍏 🌱 🍷

MELROSE Outstanding dessert and cooking apple. Hard flesh, mellow sweet flavor. Heavy annual bearer. Mid- to late-season bloom. Ripens in mid-October, but best for eating after Christmas when it develops its fruity aroma. Keeps till March-April. *Rootstocks: G-41 mini-dwarf, M-26 dwarf, M-106 semi-dwarf* 🍏 🌱 🍷

BENI SHOGUN FUJI At last, a Fuji that ripens consistently for cool summer climates. Keeps until March. Intensely sweet, crisp apple. Moderate resistance to scab. Late bloom. Ripens in mid-October. *Rootstocks: M-26 dwarf, M-106 semi-dwarf* 🍏 🌱 🍷

FLORINA Large purple-red apple with aromatic spicy flavor. Vigorous tree and strong producer. Fruit will keep into January or early February. Immune to scab and resistant to mildew. Mid- to late-season bloom. Ripens in mid to late October. *Rootstocks: M-27 mini-dwarf, M-26 dwarf, M-106 semi-dwarf* 🍏 🌱 🍷

IDARED Solid bright red apple with crisp to tender, smooth-textured flesh. Good dessert and cooking apple. Tart at harvest but mellows in storage. Heavy, consistent bearer with some resistance to scab. Bears at a young age. Early bloom. Ripens in mid to late October, keeps until May in excellent condition.

Rootstocks: M-27 mini-dwarf, M-26 dwarf, M-106 semi-dwarf 🍏 🌱 🍷

ASHMEADS KERNAL One of the finest russets of all time. Flat, gold-brown apple, very sweet and juicy. Over 200 years old and has won awards world-wide. Good keeper. Midseason bloom. Ripens in mid to late October. 🍏 Triploid: will not pollinize other varieties. *Rootstocks: M-27, G-11 & G-41 mini-dwarf, M-26 dwarf (pick up only), M-106 semi-dwarf* 🍏 🌱 🍷

ROXBURY RUSSET Mid- to late-October ripening heirloom russet. Sweet aromatic flavor, stores well into February. Russet brown skin with a green undertone. Highly esteemed for eating, cooking, and cider. Midseason bloom. 🍏 Triploid: will not pollinize other varieties. *Rootstocks: M-27 mini-dwarf, M-26 dwarf, M-106 semi-dwarf* 🍏 🌱 🍷

NEW! COSMIC CRISP WSU cross of Honeycrisp and Enterprise. Very productive variety with large fruit, red over a green background. Fruit is crisp and sweet and stores well. Easier to grow than Honeycrisp. Mid- to late-season bloom. Ripens early October in Eastern WA, should ripen late October in warmer sites in Western WA. Only available to plant in WA state. *Rootstocks: M-26 dwarf, M-106 semi-dwarf* 🍏 🌱 🍷 \$32.95 each

edible crabapple

CENTENNIAL Small elongated fruits have a bright scarlet blush with a crisp, sweet flavor that makes them excellent for eating fresh and good for canning. This beautiful, ornamental tree is very compact, yet productive and scab resistant. Blooms early midseason. Ripens in mid-August. *Rootstock: M-106*

hard cider apples 🍷

HARRY MASTERS JERSEY Ripens in late September. Bittersweet variety, slightly biennial bearing but a generally reliable producer. Good varietal cider or for blending. Late-season bloom. *Rootstocks: M-26 Dwarf, M-106 semi-dwarf*

Apple Pollination

Apples require careful attention to matching bloom times for good fruit set. In our cool spring climate, we have extended bloom times; other climates with warm springs may have more compressed bloom seasons that allow more pollinizer choices. The charts below are based on our experience in the Pacific Northwest; contact your local Master Gardeners or county agricultural extension agent for information about bloom times in your area.

~ apple bloom times ~

VERY EARLY	EARLY	MID-SEASON	LATE	VERY LATE
Gravenstein*	Centennial Crab Idared Red Alkmene Williams Pride Zelstar!	Akane • Ananas Reinette • Arkansas Black • Ashmead's Kernal* • Belmac • Ben Davis • Bramley's Seedling* • Cosmic Crisp • Early McIntosh • Enterprise • Fiesta • Freedom • Galarina™ • Golden Russet • Golden Sentinel • Grimes Golden • Honeycrisp • Initial ®* • Jonagold* • Jonamac • Karmijn* • Liberty* • Melrose • Mott's Pink • Northpole • Porter's Perfection • Queen Cox • Roxbury Russet* • RubINETTE • Scarlet Sentinel • Spartan • Tsugaru • Zaubergau Reinette*	Beni Shogun Fuji • Elstar • Florina • Pitmaston • Pineapple • Harry Masters • Jersey • Kingston Black • Yarlinton Mill • Chisel Jersey • Mettais • Redstreak • Reines des Pommes • Tremlett • Bitter	Brown Snout

Choose your pollinizer from the same or adjacent columns. For example, Idared pollinizes Williams Pride (same column) or Akane (adjacent column), but not Elstar. Varieties marked with an asterisk* do not work as pollinizers for other varieties (they have sterile pollen).

YARLINGTON MILL A productive bittersweet cider apple, slightly biennial. A good balance of sugars, acids, and tannins, suitable for varietal cider or blending. Late-season bloom. Ripens in mid-October. *Rootstocks: M-26 dwarf (pick up only)*

REINES DES POMMES A full, bittersweet flavor, producing sweet astringent juice. One of the few cider varieties that is not strongly biennial. Late-season bloom. Ripens in early October. *Rootstocks: M-26 dwarf, G-30 & G-210 semi-dwarf, M-111 semi-standard (all pick up only)*

DABINETT Bittersweet variety, good for blending. Soft tannins, very high sugar. Biennial tendency. Midseason bloom. Ripens in mid to late October. *Rootstocks: M-106 semi-dwarf* 

other varieties for pickup only:

Small quantities of other varieties are available for pickup only. Please email or phone for descriptions.

ARKANSAS BLACK M26 & M106

BELMAC M26 & M106

CHISEL JERSEY M26

GRIMES GOLDEN M26

apple rootstocks

\$4.00 each

Apples are only shipped while dormant, from February through mid-to-late April.

They are available for pickup at the nursery February through mid-November.

M-26 Dwarf Rootstock

M-106 Semi-Dwarf Rootstock

GRAFT YOUR OWN APPLE TREES - BUY [APPLE ROOTSTOCKS](#) FOR HOME GRAFTING HERE.

european pears

\$29.95

- Hardy to Zone 4
- Varieties suitable for the PNW
- All varieties need a pollinizer
- Pears tolerate heavy soil
- Look for  scab-resistant varieties for easiest growth
- Space 7'-9' on OHF87 semi-dwarf rootstock
- Harvest green, when stem separates easily from the spur

DOYENNE DE JULIETTE Sweet, juicy flavor. Does not store well, but great for canning or drying. Midseason bloom. Very early ripening pear, sometimes as early as late July.

UBILEEN Large, red-blushed pear with juicy, buttery flesh. Does not store well, but great for canning or drying. Early to midseason bloom. Ripens in early to mid-August.

ORCAS Large, smooth, juicy pear with mild sweet flavor. Excellent for canning and drying as well as fresh eating. Tree is vigorous and bears heavily. Originated on Orcas Island as a seedling. Midseason bloom. Ripens in early September.

RESCUE Large yellow pear with red blush. Excellent flavor, great for fresh eating, canning, and drying. Disease-resistant. Midseason bloom. Ripens early to mid-September. 

CONFERENCE A longtime European favorite. Medium sized, golden speckled, long-necked pear with an intense, sweet, distinctive spicy flavor. Can be eaten right off the tree or stored in refrigeration for months. Strong producer. Early season bloom. Ripens in late September. 

ARMIDA A flavorful pear of excellent quality. Scab resistant. Ripens in early fall, very compact, almost dwarf habit. Midseason bloom. 

COMICE This pear has a juicy, fine buttery texture and flavor. Large broad-based shape. Dull yellow when ripe. Needs one month of storage before ripe. Stores well until Christmas. Late season bloom. Ripens in early October.

BEURRE BOSCH A large, long-necked, golden-brown russeted pear. The flesh is finely textured and tender, with a spicy rich flavor. Very productive. High quality pear, keeps well. Mid- to late-season bloom. Ripens in mid-October.

hybrid pears

\$29.95

MAXIE™ A cross of Nijiseiki Asian Pear and Red Bartlett European Pear. Maxie is round, crisp and juicy like an Asian Pear, but with the complex European Pear flavor. Early bloom. Ripens on the tree in late August to early September.

pear rootstock

OHF-87 (Semi-Dwarf) For use with European and Asian Pears. Precocious and productive. Suitable for high density plantings and espalier. Can be maintained at 10'-12'. Space 7'-9'. A true Pyrus—hardy to Zone 4.

~ pear bloom times ~

VERY EARLY	EARLY	EARLY-MID	MID-SEASON	LATE
Nijiseiki • Shinseiki • Ichaban • Nashi • Chojuro • Mishirasu • Hamese	Kosui • Maxie	Conference	Uibileen • Rescue • Orcas • Buerre Bosch • Armida • Manon • Doyenne de Juliette • Abbe Fetel	Comice

Choose your pollinizer from the same or adjacent columns.

Pear trees are shipped only while dormant from February through mid to late April. They are available for pickup at the nursery February through November.

SHIPOVA A cross of European Pear and Mountain Ash, bearing plum-sized fruits in early September that have a sweet, delicate flavor. Partially self-fertile, but better fruit set if a European Pear pollinizer is nearby. Grows to 10'-15'. (*pick up only*) 🍏

asian pears

\$29.95

- Hardy to Zone 5
- Tolerant of heavy soil
- All varieties need a pollinizer
- Space 7'-9' on OHF87 semi-dwarf rootstock
- Ripen on the tree

SHINSEIKI Yellow-skinned fruit with white flesh, sweet mellow flavor. Fruit size is medium large. Keeps into January. Spreading type tree. Early midseason bloom. Ripens in mid-August. 🍏

HAMESE A good producer of yellow-skinned, very sweet, crisp pears. Consistent quality, year after year. Early midseason bloom. Ripens in mid-late August. 🍏

NIJISEIKI Also known as '20th Century,' this delicious yellow-skinned variety is the one found in the gourmet fruit sections of many markets. It is the most popular variety in Japan. Very juicy with good balance of sweetness and tartness. Vigorous tree. Early season bloom. Ripens in late August. 🍏

KOSUI Round, golden fruit of superb quality. Flesh is tender and juicy. One of the best flavored Asian pears available. Trees are vigorous and productive. Fruit is medium sized. Good keeper. Early to midseason bloom. Ripens in mid-September. 🍏

CHOJURO Fruit size is large. Very good quality, spicy-aromatic fruit. Flesh is crisp with a russeted brown skin. Good for home storage. Keeps till March. Medium size tree. Early season bloom. Ripens in mid to late September. 🍏

MISHIRASU Fruit size is very large, shaped and flavored more like a European pear. Flesh is intensely sweet, quite crisp and crunchy, with a golden speckled green skin. Highly rated at our tasting. Early season bloom. Ripens mid to late September. 🍏

apricots

\$32.95

- Hardy to Zone 5
- All varieties are self-fertile, but set more fruit if a pollinizer is planted
- Need warm, well-drained site protected from late frost
- Space 10'-12' on St. Julian A semi-dwarf rootstock

PUGET GOLD This is the most proven variety for the Pacific Northwest. Blooms later than most cultivars, usually avoiding most damaging frosts. Fruit is large with classic apricot shape and bright orange fruit. Firm flesh with sweet, spicy flavor, freestone. *Rootstock: St. Julian A semi-dwarf*

HARGLOW A late blooming apricot variety that shows promise for the Pacific Northwest. Large, deep orange fruit with excellent flavor. Ripens a little after Puget Gold. Shows good disease resistance. *Rootstock: St. Julian A semi-dwarf*

peach leaf curl

We suggest Sulfur or Copper-Sulfate mixed with a sticker, which holds the chemical on the plant longer. For specific concentrations of chemicals, read the label. Spraying must happen when leaves are off the tree. First spray: at bud swell, approximately mid-January. Second spray: approximately three weeks after bud break or first spray. Third spray: three weeks after second spray. Varieties resistant to leaf curl should be sprayed until well established.

peaches

\$32.95

- Hardy to Zone 5
- All varieties are self-fertile
- Need well-drained soil and warm site
- Manage for Peach Leaf Curl while trees are young
- Space 10'-12' on St. Julian A semi-dwarf rootstock
- Space 12'-15' on Krymsk 86 semi-dwarf rootstock
- Intensely flavored varieties

AVALON PRIDE Selected in Western Washington, this semi-freestone, red-skinned peach is leaf-curl resistant and sets fruit well in our maritime climate. Sweet, yellow fleshed peaches ripen in early August. Plan to control for Peach Leaf Curl on young trees. *Rootstocks: St. Julian A Semi-Dwarf, Krymsk-86 semi-dwarf*

BETTY A leaf-curl-resistant peach discovered in Ferndale. Late blooming, self-fertile, and late ripening, Betty has firm, semi-freestone fruit of excellent quality. Young tree should be managed for peach leaf curl. *Rootstocks: St. Julian A semi-dwarf, Krymsk 86 semi-dwarf*

FROST PEACH Yellow-fleshed fruit with flavor similar to locally grown Red Havens. Large to medium size with soft flesh. Very heavy bearing and must be thinned. Generally freestone and resistant to split pit. Leaf-curl resistant, with showy blooms. Ripens in mid-August. *Rootstock: St. Julian A semi-dwarf*

SALISH SUMMER (Q-18) A WSU introduction. Salish Summer is a white fleshed peach, semi-freestone, ripening in August. Curl resistant once established; young trees should be managed for Peach Leaf Curl. *Rootstocks: St. Julian A semi-dwarf, Krymsk-86 semi-dwarf*

plums

\$32.95

- Hardy to Zone 4
- Varieties chosen for disease resistance
- Most varieties need a pollinizer
- European plums pollinize other European plums (bloom too late for Japanese)
- Japanese plums pollinize other Japanese plums (bloom too early for European)
- Tolerant of most soils
- Space 10'-14' on St Julian A semi-dwarf rootstock
- Space 12'-15' on Krymsk 86 semi-dwarf rootstock

european plums

EARLY LAXTON Eat fresh plums mid to late July! Oblong, pink-orange, freestone fruit with yellow flesh has excellent flavor. Good fresh or processed. *Rootstock: St Julian A semi-dwarf*

ELMA'S SPECIAL Comes from an old orchard in Bellingham, and is probably an old variety known as *Sanctus Hubertus*. Purple-skinned fruit is very high quality, freestone, medium to small. Fleshly, juicy, full rich flavor. Consistent heavy bearer. Excellent fresh or processed, exceptional dried and in jam. Ripens in late July-early August. *Rootstocks: St. Julian A semi-dwarf, Krymsk-86 semi-dwarf*

IMPERIAL EPINEUSE An antique French prune variety that sets the standard in prune plum flavor. Excellent prune plum for drying. The sweet, firm, freestone fruit ripens in early to mid-August. *Rootstock: St Julian A semi-dwarf*

QUEEN VICTORIA A large, oval, pinkish-purple skinned freestone plum with sweet, golden flesh. Excellent fresh or dried. Partially self-fertile. Ripens in late August. *Rootstock: St Julian A semi-dwarf*

YELLOW EGG Large, oval, bright yellow plum with yellow flesh. Excellent for fresh eating or canning. Ripens in early September. *Rootstock: St Julian A semi-dwarf*

peach & plum rootstocks

ST. JULIANA (Semi-Dwarf) Precocious and productive, and well anchored. Grows to 12'-15'.

KRYMSK 86 (Semi-Dwarf) Slightly larger than St. Julian A. Well anchored and tolerant of heavy soil. Grows to 15'.

STANLEY (Italian Prune type) Excellent for cooking and eating out of hand. Hardy, vigorous, and produces full crops annually. The fruit is large, dark blue, juicy, and good quality. Partially self-fertile. Ripens in early to mid-September. *Rootstock: St Julian A semi-dwarf*

japanese plums

METHLEY (Self-fertile) Earliest ripening plum. Fruits are reddish purple with juicy, sweet, red flesh. Production is consistent and very heavy. Ripens in mid to late July. *Rootstock: St Julian A semi-dwarf*

SHIRO Yellow skin and flesh with very sweet, juicy flavor. Consistent bearer, very productive. Most consistent producer of the Japanese types for this area. Ripens in early August. *Rootstock: St Julian A semi-dwarf*

HOLLYWOOD Truly an edible ornamental! Pale pink flowers and deep purple foliage are a bonus to the deep red fruit that ripens in August. Excellent for plum jelly. Partially self-fertile, Methley is a good pollinizer. *Rootstock: St Julian A semi-dwarf*

PEACH PLUM Very large fruit with apricot color. This plum has extraordinary texture and flavor. Truly a delight to eat. The tree is vigorous and moderately productive. Ripens in mid to late August. *Rootstocks: St Julian A semi-dwarf, Krymsk-86 semi-dwarf*

plum pollination

Japanese plums and related varieties bloom several weeks earlier than the European type plums. The only self-fertile variety is Methley. Plant at least two European plums or two Japanese varieties together for pollination.

FORTUNE Large fruit has reddish-purple skin. The firm flesh is very sweet and flavorful. Semi-freestone. Ripens in late August. *Rootstocks: St. Julian A semi-dwarf, Krymsk-86 semi-dwarf*

tart cherries

\$32.95

- Hardy to Zone 5
- Space 8'-10' on Gisela 5 dwarf rootstock
- Space 15'-20' on Mazzard semi-dwarf rootstock
- Stake dwarf trees to support fruit load
- Self-fertile
- Will not pollinate with sweet cherries
- Easiest cherries to grow
- Protect from birds

DANUBE Large-sized fruit with burgundy-red skin. The flesh and juice of this cherry make for wonderful pies and jams. High sugar for a pie cherry. Ripens in mid to late July, vigorous and productive. *Rootstock: Gisela 5 dwarf*

MONTMORENCY Medium to large fruits, bright red in color. Standard tart cherry for commercial or home plantings. Good quality and flavor. Very precocious and productive. Ripens in mid-July. *Rootstocks: Gisela 5 dwarf, Mazzard semi-dwarf*

MORELLO Dark red pie cherry. Highly productive, excellent quality fruit. Ripens in late July. *Rootstock: Gisela 5 dwarf*

sweet cherries

\$32.95

- Hardy to Zone 5
- Space 10' on Gisela 5 dwarf rootstock
- Space 10'-15' on Krymsk 5 semi dwarf rootstock
- Space 12'-15' on Mazzard semi-dwarf rootstock
- Stake dwarf trees to support fruit load
- Proven crack-resistant varieties
- Most varieties need a pollinizer
- Best in well-drained soil

EARLY BURLAT Consistent bearing variety has large, juicy, deep red fruit. Early Burlat is

crack-resistant and resistant to bacterial canker. Ripens in late June, nearly 2 weeks ahead of other varieties. *Rootstock: Gisela 5 dwarf*

HARTLAND A very productive, precocious variety bearing large, firm black cherries. Very promising in the WSU Mt. Vernon fruit trials. Shows some resistance to bacterial canker. Ripens in early to mid-July. *Rootstock: Gisela 5 dwarf*

RAINIER Large, yellow, Royal Ann type. Firm flesh; high quality for eating and canning. Trees are vigorous, productive and very hardy. Ripens in mid-July. *Rootstocks: Gisela 5 dwarf*

VAN An excellent quality cherry for this area. Resistant to cracking; heavy producer, large, black fruit is very firm and has good flavor. Ripens in mid-July. *Rootstock: Gisela 5 dwarf*

BLACK GOLD (Self-Fertile) Very late blooming black cherry, escaping most frost. The tree also has good canker resistance. The large, firm black cherries are crack-resistant, have excellent flavor, and ripen in early to mid-July. *Rootstocks: Gisela 5 dwarf, Krymsk 5 semi-dwarf*

cherry rootstock info

DWARF GISELA #5 The growth habit on this rootstock is more spreading than upright—a desirable trait for cherries on trellis systems. Root anchorage is only fair, so staking is necessary. The stake is also extremely valuable for tying up branches that are laden with fruit. Can be maintained under 10' and is suitable for trellis systems. 8'-10' spacing.

SEMI-DWARF KRYMSK 5 Precocious with good anchorage and some tolerance of wetter soils. Unlike Gisela, productive varieties will not overset and produce small fruit on this rootstock. Can be maintained at 12'-15'. 12'-15' spacing.

SEMI-DWARF MAZZARD Tolerant of heavy soils. Well anchored, so only initial staking needed. Vigorous sweet cherries on Mazzard will become large trees if not pruned. Can be maintained to 15'-18'. 15'-20' spacing.

WHITE GOLD (Self-Fertile) An excellent red-blushed yellow cherry. White Gold is crack-resistant and resistant to bacterial canker. Ripens in mid-July. *Rootstocks: Gisela 5 dwarf*

STARLETTA™ 'Tom's Blush' (Self-Fertile) Large, red-blushed yellow cherries, ripening just after Rainier. Very resistant to bacterial canker. *Rootstock: Krymsk 5 semi-dwarf*

VANDELAY (Self-Fertile) A reddish black cherry from Canada that resists bacterial canker. Very large, firm, crack-resistant reddish-black cherries with excellent flavor. Ripens in mid to late July. *Rootstock: Gisela 5 dwarf*

LAPINS (Self-Fertile) Dark, crack-resistant cherry, firm with great flavor. Ripens late July or early August. A great cherry tree if you can only have one! *Rootstocks: Gisela 5 Dwarf, Krymsk 5 Semi-Dwarf, Mazzard semi-dwarf*

SWEETHEART (Self-Fertile) Extend your cherry season! Large, bright red, firm, somewhat crack-resistant fruit. Ripens in early August. *Rootstock: Gisela 5 dwarf*

getting started with UFO cherries

The Upright Fruiting Offshoots (UFO) system for sweet cherries was developed to simplify training, pruning, and crop management. At maturity, the UFO system yields a fruiting wall that is productive and simple to maintain. Each tree has a permanent single horizontal trunk from which fruiting shoots are grown vertically. Fruit are borne predominantly on spurs but also at the base of 1-year-old shoots, all on vertical wood. Establishing the UFO system is straightforward with little to no pruning required at planting.

- Space rows 9'-10' apart
- In the row, space trees 5'-6' apart (*Gisela 5 Rootstock*)
- Trellis should be at least 5 wires, lowest wire at 20", then spaced every 18"-20"
- Unbranched (*whip*) trees are planted at a 45-degree angle pointing the terminal to the south. Important: do not plant the trees vertically and bend them to a 45-degree angle.

For complete growing and training details, download the Training Sweet Cherries handout from our website.

strawberries

bundle of 20 - \$10.95

- Main croppers for one big June or July crop
- Day-neutral (everbearers) for all-summer crops
- 10"-18" spacing
- Well-drained fertile soil, full sun
- Disease-resistant varieties produce 4-6 years before needing replanting

everbearing (day-neutral)

Hardy to Zone 4

Prune runners and thin first set of blossoms for best production.

SEASCAPE Excellent flavor, heavy yields of large berries, with good disease resistance. A proven cultivar in the Northwest; low chill requirements make it promising for warm winter climates.

SWEET ANN A new day-neutral cultivar from Lassen Canyon Nursery. Sweet Ann is productive, producing large fruit with excellent flavor. Does not produce prolific runners. Very disease resistant.

main croppers (June bearers)

Hardy to Zone 6

MARY'S PEAK A new variety developed for the PNW. Large firm berries with excellent flavor good for fresh eating or processing. Upright plants are very productive. Ripens in late season.

TILLAMOOK Large to very large berries ripen midseason. Very firm, great for fresh eating or freezing. Good disease resistance.

raspberries

each - \$6.95
bundle of 5 - \$28.95
bundle of 10 - \$44.95

- Space 24"-30" when planting
- Best in fertile, well-drained soil
- Do not plant too deep! This is the #1 reason for failure
- Summer raspberries bear heavy crops on second year canes
- Fall raspberries bear on 1 and 2 year canes, can produce 2 light crops each year, or 1 heavy crop in autumn

summer bearing

Hardy to Zone 6

CASCADE DELIGHT Very large berries are bright red, quite firm, with excellent flavor, rivaling Tulameen. Productive plants are resistant to root rot, suitable for wetter ground than Tulameen or Meeker.

TULAMEEN Firm, very large, light-red aromatic fruit is produced over a long summer season in July and August. Good flavor, productive, and easy to grow in a wide range of soils.

MEEKER Fruit is large, rich red, and firm. Outstanding fruit, has excellent quality for fresh eating and processing. Very productive. In the coldest areas, plant in protected areas if possible. Somewhat resistant to berry rot.

fall bearing

Hardy to Zone 6

CAROLINE An early cropping, fall fruiting, red raspberry cultivar that is known for its exceptional flavor. Extremely productive, with large, firm fruit. Somewhat tolerant of root rot.

FALL GOLD Enjoy intensely sweet, golden yellow berries from late August until mid-October. A great change from red varieties. Medium to large size, good yields.

blueberries

\$16.95

- Blueberries ripen July-August
- Mature at 3 ½'-6' high
- Space 3 ½'-6' at planting
- Best in moist, acidic soil
- 1 gl. size; some varieties are available in larger sizes for pick up

SPARTAN Giant, light blue berries have a delicious tangy, sweet flavor. Upright habit, to 5'-6', with bright gold and orange fall color. Ripens early in the season. *Hardy to Zone 5.*

REKA Very productive and vigorous, Reka bears medium to large, dark-blue berries with excellent flavor. Tolerant of most soil types, even winter wet. Ripens early in the season. *Hardy to Zone 4.*

PATRIOT Large, dark-blue, highly flavored berries. Producing 10-20 lbs. of fruit at maturity. Will perform in wet soils better than most varieties. Spreading growth habit to 4'. Ripens early in the season over several weeks. *Hardy to Zone 3.*

DRAPER Large crisp, light-blue berries are easy and quick to pick. Mild sweet flavor. Stocky, upright habit, grows 4'-6' high. Ripens in early to midseason. *Hardy to Zone 5.*

TOP HAT Self-fertile A compact, spherical shape that reaches 16"-20" high and 12"-24" across at maturity. Berries are light blue, medium to small size, with a pleasant flavor, ripening early midseason. Foliage turns blazing crimson in the fall. *Hardy to Zone 3.*

NORTHLAND The fruit is very sweet; berries are medium sized. Bush is vigorous with spreading habit. Extremely productive; over 20 lbs. per bush. Good choice for freezing - they ripen all at once. 4' tall at maturity. Ripens in early midseason. *Hardy to Zone 3.*

BLUE CROP Berries medium-large, light blue with firm flesh. Flavor good, moderately aromatic. Plant is vigorous, consistent heavy producer. Spreading growth, 6' tall at maturity. Ripens in midseason. *Hardy to Zone 4.*

TORO Very productive, producing heavy clusters of giant sky-blue fruit. Toro is an excellent

ornamental blueberry, with showy, bright pink spring flowers and red fall foliage. Mature at 4'. Ripens in midseason. *Hardy to Zone 4.*

SUNSHINE BLUE (Self-Fertile) This semi-dwarf, semi-evergreen blueberry is a compact bush to 3' tall. Showy hot pink flowers yield large crops of high quality dime-sized fruit. Harvest can last 9 weeks. Sunshine Blue will tolerate higher pH than most blueberries. An excellent patio plant. Ripens in midseason. *Hardy to Zone 5.*

CHANDLER GIANT berries with delicious flavor! The huge berries ripen over a six week period. Upright spreading form, reaching 5'-6' at maturity. Ripens in midseason. *Hardy to Zone 4.*

CHIPPEWA This compact bush to 3' has large, light blue berries with an excellent sweet

flavor. Ripens in midseason. *Hardy to Zone 3.*

LEGACY Plants are vigorous, slightly spreading to 6'. Heavy consistent crops of excellent quality berries late summer. Rated as one of the best flavored varieties in USDA trials. In mild winter areas, Legacy is evergreen. Late ripening. *Hardy to Zone 5.*

LIBERTY Vigorous and productive, Liberty has large, firm, sky-blue berries with excellent flavor. Ripens over a 2-3 week period. Late ripening. *Hardy to Zone 4.*

blueberry relative

EVERGREEN HUCKLEBERRY (*Vaccinium ovatum*) Produces a multitude of white or pinkish bell-shaped blossoms in April and May

and tasty blue-black berries in August and September. Prefers a shady environment but can take full sun in cooler areas. Erect shrub grows 8'-10' in partial shade, 4'-5' in full sun. Prefers acid soil and mulched roots. *Hardy to Zone 7. \$16.95*

hazelnuts

\$29.95

- *Hardy to Zone 5*
- *Trees mature at 15'-20'*
- *Tolerant of most soils*
- *All varieties need a pollinizer*
- *All varieties are very resistant to Eastern Filbert Blight*

JEFFERSON High quality, large nuts on a compact, very blight resistant cultivar. Low blank ratio. For best pollination, plant with York, Theta and Yamhill. 15' at maturity.

THETA A blight resistant hazelnut from OSU. Moderate sized tree bears medium sized nuts of good quality. Good pollinizer for Jefferson, York, and Yamhill.

YAMHILL A new OSU hazelnut with complete resistance to Eastern Filbert Blight. Compact habit, less than 10' tall, 12' wide at maturity. Small, high quality nuts. Pollinize with York, Jefferson, or Theta.

YORK Amid-season pollinizer with a long bloom season. Compatible with most cultivars, including Theta, Jefferson, and Yamhill. Highly resistant to Eastern Filbert Blight and produces round medium-sized nuts.

almonds

\$34.95

- *Hardy to Zone 7*
- *New almond cultivars from the Ukraine*
- *Late blooming to escape most frosts - the reason most almonds fail to set nuts in the Northwest*
- *Trees will grow to 15'-20', space 15'*
- *Resistant to Peach Leaf Curl*

BOUNTY A hardy, late blooming, Ukrainian variety that bears heavy crops of sweet, soft-shelled nuts. Somewhat self-fertile; larger crops if 2 varieties are planted. Not proven in Western WA, but worth trying.

ORACLE One of several new almond cultivars introduced from the Ukraine. Late enough blooming to escape most frosts. Oracle has sweet soft-shelled nuts. Somewhat self-fertile; larger crops if 2 varieties are planted. Not proven in Western WA, but worth trying.

walnuts

\$34.95

- *Hardy to Zone 4*
- *Large trees, mature at 30'-40'*
- *Best in deep, well-drained soil*
- *Partially self-fertile, best nut production with a pollinizer*
- *Walnuts ripen in mid-October*

CASCADE An outstanding, relatively new selection. Very precocious and heavy producing. Care must be taken when cropping at an early age. Clusters of 6 or more nuts can bend the branches to the ground. Nuts are buttery and flavorful.

MANREGION Vigorous, fast growing trees with lateral branching habit. Highly productive with large, high-quality nuts.

kiwi fruit

\$19.95

- Best in full sun, well-drained soil
- Support on trellis or arbor
- Plant both female and male plants together for fruit production
- Space 10'-15' at plantings
- All of the kiwi fruits freeze well, whole or sliced
- We ship 1 gl. vines
- Larger plants available for pick up at the nursery

hardy (*Actinidia arguta*)

Hardy to Zone 5

ANANASNAJA ('ANA') (Female) Vigorous vines with outstanding flavorful, spicy fruit. Smooth skin, no need to peel. Fruit is 1½" long. Ours ripen early October. Pollinized by *arguta* male.

JUMBO (Female) Italian variety with one of the largest fruits of the hardy kiwis. Tasty sweet flavor, productive vines, slightly later ripening than Ana. Pollinized by *arguta* male.

HARDY RED (Female) Striking cranberry-red fruit with a delicious sweet-tart flavor, always a favorite in taste tests. Ripens in October with other *arguta* varieties. Pollinized by *arguta* male. Hardy to -25°F.

74-49 (Female) Earliest ripening kiwi in this group. Large, smooth skinned fruit similar to Ana, but ripening a week or two earlier. Pollinized by *arguta* male.

ARGUTAKIWI (Male) Pollinizes up to 8 females; plant within 100' of females. Does not need overhead trellising as it does not produce fruit. Extremely hardy.

fuzzy (*Actinidia deliciosa*)

Hardy to Zone 7

NEW! JENNY (Female) A self-fertile fuzzy kiwi for the smaller yard! Jenny will produce kiwi that ripen mid-October, and store well in refrigeration. Planting in a protected area and wrapping the trunk of young vines at dormancy is recommended.

SAANICHTON (Female) This is similar to the kiwi you find in the markets, and proven in our area. Beautiful, vigorous vine with large fuzzy leaves. The fuzz is a vibrant red on the new growth. A delectable kiwi flavor with a fuzzy skin and attractive lime-green flesh. Fuzzy kiwis store well, much longer than the smooth skinned hardy kiwis. Plant in protected locations. We recommend wrapping all the trunks with closed-cell insulation at dormancy; that seems to solve most cold-hardiness problems. Hardy to 10°F.

CALIFORNIA (Male) Necessary to pollinize Saanichton. Will pollinate up to 8 plants.

variegated, hardy (*Actinidia kolomikta*)

Hardy to Zone 3

SEPTEMBER SUN (Female) These are the most ornamental vines of the kiwis we offer. The smooth skinned fruit is high quality and the sweetest of the kiwis. It is also the smallest

(¾" diameter); they can be eaten like grapes. Ripens in early September in the Northwest; well suited for cool summer areas. This vine is not very vigorous or ideal for more confined locations. Both female and male vines are very attractive. Hardy to -40°F.

KOLOMIKTA (Male) Pollinizes up to 8 females. The male is particularly striking with its pink, white, and green variegated leaves. Retains leaf color best when grown in partial shade in a cool location.

blackberries

\$10.95

- Best in well-drained, fertile soil
- Protect from severe winter cold
- Provide trellis support
- Best crops with ample summer water
- Ripen in July-August
- Space 4'-6' at planting
- We sell 2-yr.-old canes

MARIONBERRY A medium to large blackberry with bright red to reddish black fruit, excellent sweet flavor. This is one of the most productive and vigorous blackberries. Fruits are long and conical with medium firmness, perfect for fresh eating and for processing. Fruits late July into early August in the Northwest. Hardy to Zone 7.

THORNLESS LOGANBERRY A cross between a wild blackberry and a raspberry, this variety has a unique and delectable flavor. The bushes are thornless making it an ideal selection for the home gardener. Early season. Hardy to Zone 5.

THORNLESS LOCH NESS A truly thornless blackberry developed in Scotland. Loch Ness is a very productive variety with exceptional flavor and real gourmet quality. Loch Ness should become one of the very best thornless blackberries for the home garden. Ripens in late July. Hardy to Zone 5

THORNLESS TRIPLE CROWN Very productive vines bear huge, sweet berries beginning in August and continuing till frost. Well managed plants have been reported to bear over 30 lbs. of fruit per plant. Hardy to Zone 5.

table grapes for cool sites

\$14.95

Northwest Washington has generally cool summers. Grape growers talk about Growing Degree Days when considering ripening times. Growing Degree Days (GDD) measure the accumulation of heat above 50°F during the summer. Much of Northwest Washington has GDD's of 1500-1700. If you live near I-5, or within 20 miles of salt water, the varieties listed for cool sites will be the most likely to ripen for you.

- \$14.95 Own Root Grown
- Hardy to Zone 5 when established
- Needs trellis support
- Annual pruning required for full crops
- Space 4'-8' at planting

INTERLAKEN Ripens mid-September. Golden clusters are medium in size with small berries. Bunching tends to be uneven in some years. Fruit quality is outstanding.

LYNDEN BLUE (GIANT FREDONIA) Concord type. Ripens mid-late September. Grown in Mission, British Columbia for more than 4 decades. Now easily found in gardens throughout Lynden, Washington. Medium to large bunches, very large berries, dark blue-black; sweet mild flavor slip-skin with seeds. Good fresh eating and makes excellent juice.

Very popular at our fall fruit tastings. Very compact vine.

JUPITER (pat.) Ripens mid-September. Large bunches of seedless blue-black berries. Excellent flavor, crisp berries. One of the best for cool sites.

CANADICE Ripens mid to late September. Pink seedless, with distinctive spicy flavor. A very consistent producer in cool summer climates. Has well-filled, loose clusters of medium-sized berries. Very hardy.

VENUS Ripens in late September. Large bunches of blue-black berries, most years seedless but with an occasional soft seed. Distinctive flavor, consistent producer.

RELIANCE Ripens late September. Sweet flavored red seedless grape, a popular favorite at our fall tasting. Clusters are full and berries large for the maritime climate. Very productive.

GLENORA A seedless deep blue-black grape with slightly slip-skin like a Concord. An excellent variety if you love the Concord flavor but don't want seeds. Ripens late September to early October. On the border for ripening in the coolest sites.

table grapes for warm sites

\$14.95

The varieties below are best where there are at least 1900 Growing Degree Days (GDD), such as Southwest Washington and the Willamette valley, eastern Washington, or particularly warm sites away from salt water. 'Gratitude' and 'Hope' are very disease resistant.

FAITH (pat.) A blue-black seedless grape ripening in early October. Very crack resistant.

GRATITUDE (pat.) Seedless green berries that ripen in mid-October in warm sites. Very crack resistant.

HOPE (pat.) Green seedless grapes ripen in mid-October in warm sites. Very productive and crack resistant.

grape rootstock

101-14 Rootstock prefers heavy soils, has moderate drought tolerance and relatively high tolerance for wet feet.

3309 Rootstock prefers deep, well drained soils, has low drought tolerance and relatively high tolerance for wet feet.

Riparia Gloire Rootstock prefers deep, fertile soils, with low drought tolerance and relatively high tolerance for wet feet. The lowest vigor rootstock, giving the most compact vines.

Schwarzmann 01 Rootstock is a low vigor rootstock that prefers deep, fertile soils. Moderate drought resistance, moderate tolerance of winter wet. Good resistance to soil nematodes.

NEPTUNE (pat.) Ripens early to mid-October. Best in warm sites. Crisp, seedless, white berries, excellent flavor and good disease resistance.

wine grapes

\$16.95 Grafted

- \$16.95 grafted
- Hardy to Zone 5 when established
- Needs trellis support
- Annual pruning required for full crops
- Space 4'-8' at planting
- Grafting grapes on rootstock promotes earlier ripening
- Grafted grapes are more compact

white wine grapes

MADELEINE ANGEVINE A mid-September ripening, very worthwhile grape, giving heavy crops of green-white berries that yield large quantities of juice for wine, and may also be enjoyed fresh. Bunch rot and mildew susceptible. Makes an outstanding white wine. Needs 1600-1900 GDD to ripen. Grafted on 101-14

ISKORKA Originating in Russia (the name means "sparkle"), it makes

an excellent white wine with mineral notes. Needs 1600 GDD to ripen. *Grafted on 3309*

SIEGERREBE Ripens in early September. Pink wine grape with small bunches. Good quality, low-acid maturity—makes excellent white wine. Moderately productive, medium vigor. Needs less than 1600 GDD to ripen. *Grafted on 101-14*

red wine grapes

AGRIA A red wine grape originally from Hungary. For an early ripening red, this one is quite tannic, with flavor similar to Cabernet Sauvignon. Good producer. A very promising grape for our cooler, maritime climate. Also very ornamental with great fall color. 1900 GDD needed to ripen. *Grafted on 3309*

GARANOIR A very early ripening red, of Swiss origin. This cross of Gamay Noir and Reichensteiner does not gain high sugars, but has low acids when ripe, making it an excellent grape for blending with higher sugar, higher acid juice. Under 1600 GDD needed to ripen. *Grafted on 3309*

GOLUBOK Russian origin; an early teinturier with a lot of potential for a unique full-bodied red wine. One of the most promising early reds in our trial; requires less than 1600 GDD to ripen. *Grafted on 3309*

PINOT NOIR PRECOCE An early ripening sport of Pinot Noir that is showing much promise in our grape trials. This clone of Pinot Noir can

ripen up to 3 weeks earlier than other Pinot Noir clones. Acid will drop into very acceptable levels every year in our trials. Needs less than 1600 GDD to ripen. *Grafted on 101-14*

PINOT NOIR 71 (French 777) One of the most promising clones of Pinot Noir in our trials so far, ripening before the Wadenswill and Dijon clones. Plant canopies must be well managed and cluster thinned to achieve quality in all Pinot clones grown in this region. 1800-1900 GDD needed to ripen. *Grafted on 3309*

REGENT recent German cross. Bred mainly for the German organic wine industry. Regent is extremely resistant to diseases. Ripens at least a week ahead of Pinot Noir. Makes a full-bodied red wine in warm years. Promising in our grape trials, it should prove to be an excellent grape for the home gardener or winemaker. 1600-1900 GDD. *Grafted on 3309*

ZWEIGELT-REBE A recent Austrian cross. Very vigorous and highly productive, with very dark grapes. Ripens a few days before Pinot Noir. Excellent for blending or as a varietal. This grape has been able to continue its ripening process in even the coldest summers. Must be thinned heavily and will still produce 6 tons to the acre. One of our favorite reds for the region. Needs 1600-1900 GDD to ripen. *Grafted on 3309*

dual purpose grape

MUSCAT OF NORWAY An early ripening red

grape that has large berries in big clusters. This has performed well in the Northwest, needing under 1600 GDD to ripen. This small seeded grape is excellent for eating and also can be used to make a fruity blush wine. *Available summer 2020.*

currants & gooseberries

- Full sun to partial shade
- Grow 4'-6' high, space 4'-6'
- Ornamental shrubs easily trained as espalier or standard
- Excellent fruit for fresh eating, jams, and cooking
- Ripen in July

starting with grapes in the northwest

Our region differs from the main grape-growing regions of the world because of our lack of summer heat, but both table and wine grapes can be grown here successfully. A couple of tips to help you succeed:

- **Site** - Grapes absolutely need full sun, and should be sited in the warmest spot you have.
- **Soil** - Grapes prefer well-drained sandy or gravelly soil. If your soil is heavy, build raised beds or rows.
- **Thinning**: On established grapes, thinning shoots and fruit bunches is essential to fruit quality.
- **Grafting**: Wine grapes and later-ripening table grapes can be grafted to promote earlier ripening.
- **Training for wine grapes**: Vertical Shoot Positioning (VSP) is a cane-pruning method that is easy to learn and maintain. New canes are trained on the lowest wire of a trellis, and shoots from those are trained vertically and bear fruit.
- **Training for table grapes**: Curtain systems are the most productive for table grapes. Permanent cordons are trained on a high wire. Shoots grow from spurs on the cordons and hang down, each shoot bearing a bunch of grapes.

Training for wine grapes

Training for table grapes

- *Black currants and thorny gooseberries are deer resistant*
- *1 gl. size for shipping, larger sizes available for pick up only*

currants

\$14.95

Hardy to Zone 3

ROVADA (RED) Very large fruit borne on long chains make picking a breeze. This selection from Holland is quite productive, and very disease resistant too! Excellent for preserves, or eating fresh.

CONSORT (BLACK) Strong, unique flavors, excellent for jams and syrups. An excellent, disease-resistant cultivar. Fruit grows in clusters. Bushes grow to 4-5'. (*pick up only*)

BEN TIRAN (BLACK) Upright growing black currant from Scotland with large, shiny fruit. High yielding, late blooming, escaping most spring frosts. (*pick up only*)

BEN SAREK (BLACK) A disease-resistant black currant from the Scottish Research Institute. Compact bushes are loaded with large, shiny black fruit. Mildew and rust resistant. Grows to 3'-4'.

TIBEN (BLACK) Black currant from Poland with excellent disease resistance. High yielding and easy to grow. Late ripening, and very sweet.

WHITE PEARL (WHITE) Highly productive cultivar. Beautiful pinkish-white translucent fruit is sweet and flavorful. Attractive upright growth habit. (*pick up only*)

gooseberries

\$14.95

Hardy to Zone 3

ACHILLES RED Large fruit can be used green for cooking, or allowed to ripen to deep red for fresh eating. Later ripening than many varieties. A compact growing plant with good rust resistance.

BLACK VELVET Extremely productive variety with sweet, dark red fruit with a blueberry-like flavor. Good disease resistance.

POORMAN Vigorous, very productive upright plant that produces the sweetest gooseberry you'll ever eat. Berry size is large with pinkish red color; very disease resistant.

OREGON CHAMPION Medium-large, yellow-green berries ripen midsummer. Fewer thorns than many gooseberries, on a spreading plant.

3' tall, 4' wide. Mildew resistant.

ORUS 8 Medium sized, dark purple fruit with wonderful flavor—considered one of the best gooseberries for fresh eating. This cross of Gooseberry and Black Currant is very pest and disease resistant.

JOSTABERRY A cross between Black Currant and Gooseberry. A fine blending of the mel-low gooseberry flavor with hints of the black currant's taste. Translucent purple-black fruit makes an excellent jam. Mildew and Blister Rust resistant. Thornless.

custom propagation at cloud mountain

We can grow it for you!

wine and table grapes

If you'd like to plant more than 20 vines of a variety, we can custom propagate for you, by rooting cuttings. Pricing is based on total vine number ordered; call for details. Orders are propagated on a first-come, first-served basis—we have limited bud wood of some varieties.

Orders must be placed by January 15th. Minimum order is 20 vines per variety. Propagation is done during the months of February and March. You can arrange to pick up new plants in June, or we can grow the vines on for you and ship in February. Orders can be reserved by placing a 50% deposit. Balance is due upon pickup or before shipping.

The Washington State Wine Grape Assessment is \$.10 per vine. All grape orders will be charged this fee.

Descriptions of varieties are available on request.

heirloom and hard cider apples

Many of our customers have asked us for varieties of apple trees that we don't normally propagate. So, for those of you who are looking for one of those heirloom or hard-to-find varieties that we don't carry in the sales yard, we can custom propagate for you. Orders must be placed by August 1st; the trees are chip-budded in August, and will be available for pickup in 1.5 years. All rootstock varieties available to be grafted on are: Geneva 41 Mini-Dwarf, M-26 Dwarf, or M-106 Semi-Dwarf. Custom pears are also available on OHF-87, and stone fruits on Krymsk rootstocks.

Descriptions of varieties and rootstocks are on request.

small fruits

We can also custom grow quantities of hardy kiwi vines, currant, and gooseberry plants, and organic strawberry plugs. Contact us for pricing.

hardy kiwi varieties

(Minimum order 10) Anasaja, 74-49, Hardy Red, Jumbo, Male pollinizer.

currants & gooseberries

(Minimum order 10) Black Currants: Blackdown, Consort, Tiben, Ben Sarek. Red Currants: Rovada, Cherry. Gooseberries: Poorman, Oregon Champion, Orus-8, Black Velvet, Achilles Red, Jostaberry.

notable fruits

This is an assortment of several unusual fruits that can be grown in cool summer climates. We are finding most of these have strong ornamental qualities to complement their culinary attributes. The selections we carry are virtually pest-free and easy to grow. Enjoy!

chokeberry (*Aronia melonocarpa*)

\$15.95

Hardy to Zone 3

Extremely ornamental shrub that produces showy white flowers followed by astringent, sweet blue-black berries that make excellent preserves and juice and are extremely high in antioxidants. A bonus is the fiery fall foliage color. Easy to grow. Tolerant of wet soil. 1 gl. size plants.

EGERTA Very large black berries in tight clusters; red-orange fall color. Grows to 6'. Available in early May.

VIKING Prolific large black berries; crimson fall color. Grows to 6'.

asparagus - 10

\$14.95

Hardy to Zone 2

JERSEY KNIGHT An all-male variety of asparagus that out-produces older varieties. It doesn't set berries, meaning more energy goes into producing sweet edible stalks. Asparagus likes well-drained soil and ample moisture; amend the bed heavily with manure before planting. 2 yr. old crowns.

autumn olive (*Eleagnus umbellata*)

\$14.95

Hardy to Zone 4

Large, deciduous shrubs, growing to 8'-10'. Spring flowers are extremely attractive to pollinators. If two varieties are planted, deep red, sweet-tart berries ripen in early fall. Nitrogen-fixing plants, tolerant of most soils. 1 gl. size plants, available in early May.

RUBY Large, sweet berries.

GARNET Deep red, flavorful berries.

elderberries

\$

Hardy to Zone 5

- Varieties selected for best fruit
- 8'-10' at maturity
- Full sun or partial shade
- For heavier fruiting, plant 2 varieties
- Available for pick up only

YORK Our most productive variety with large, dark purple berries. Ripens in mid-August.

NOVA Our most vigorous plant with large clusters of dark purple berries. Ripens in mid-August.

figs

\$19.95

Hardy to Zone 7

- Older fig trees are hardy to 10°F
- Best in warm, protected sites
- Try wrapping the fig trunk with closed-cell pipe insulation each winter
- 1 gl size

DESERT KING Seems to be the most reliable and hardiest fig for the Northwest. Green skin

with strawberry flesh. Delicious fresh and good for drying. Ripens in late July.

LATTARULLA Also known as the Italian Honey Fig. Green skinned, honey colored flesh. Very compact habit.

NEVARELLA, also called 'OSBORNE PROLOFIC' Productive fig, promising in tests at the Mount Vernon Fruit Research Station. Deep bronze to brown fig with pale amber flesh. Hardy for the Northwest.

OLYMPIAN A great cool climate fig discovered in Olympia. Violet skinned figs have deep red flesh. Can ripen 2 crops in warmer sites.

goji berry (*Lycium barbarum*)

\$22.95

Hardy to Zone 5

CRIMSON STAR Also known as Wolfberry. An attractive 6'-10' deciduous shrub that has light purple, bell-shaped flowers followed by bright red berries. The sweet, distinctive fruit has become famous lately for its antioxidant qualities. Sprawling, vine-like bushes. Full to part sun, well-drained soil. 1 gl. size plants.

honeyberry (*Lonicera caerulea var. edulis*)

\$14.95

Hardy to Zone 3

Very hardy, deciduous bush honeysuckles (honeysuckle relative). Produce small, fragrant white flowers followed by tasty fruits about the size and flavor of blueberries, ripening in June. These can fruit in shade or sun and are very hardy. Plant both varieties for fruit set. 1 gl. sized plants.

figs

Figs can be very successful in the Northwest, but they need careful siting and some summer pruning to produce the best crops. Planting them against a south or west facing wall will increase the summer heat to hasten ripening. Because they are on their own roots, established figs can freeze to the ground in a severe winter and come back the following year.

BLUE MOON Attractive spreading form, growing to 4' high and wide with bright green foliage.

BLUE VELVET Spreading, low growing form with velvety gray-green foliage. Grows to 3' high, 4' wide.

medlar

\$34.95

Hardy to Zone 5

ROYAL beautiful small tree, growing to 8'-10'. Large silky, white blossoms in spring are followed by abundant crops of large fruit. The fruit is picked late fall when hard, and brought in to soften and ripen, used for preserves or fresh eating.

mulberry

\$24.95

Hardy to Zone 5

ILLINOIS EVERBEARING Fruit quality is excellent for fresh eating and processing. Very precocious, bearing heavy crops at a young age. Fruits are 1½" long and wide. Ripens in early July and continues through September. 1 gl size.

olive (*Olea europea*)

\$24.95

Hardy to 10°F

ARBEQUINA Spanish variety that is self-fertile, early ripening, and quite ornamental. An evergreen tree, it grows to 10'-15' in many years, with soft gray, willow-shaped leaves. Needs a warm site, against a south or west wall is best, with well-drained soil. 1 gl. size.

persimmon

\$

IZU (*Self-fertile*) An early ripening non-astringent Asian persimmon that should perform well in our climate. Izu has medium sized fruit with excellent flavor, ripening in late October on a small tree (10'-15'). Bring fruit inside before a hard freeze to continue ripening. Hardy to 0°F. (*Limited quantities, pick up only*)

NIKITA'S GIFT (*Self-fertile*) A hybrid of Asian and American persimmons. 2-3" fruits ripen in late October on a tree that will mature at 12'-15'. Fruit is ready to eat when soft. (*pick up only*)

quince

\$29.95

Hardy to Zone 5

AROMATNAYA (*Self-fertile*) Sweeter than most quinces, excellent for preserves and cooking in both sweet and savory dishes. Upright habit. Ripens in October. Very disease resistant.

rhubarb

\$9.95

Hardy to Zone 3

CRIMSON CHERRY Deep red stalks with rich flavor; great in pies and sauces. Very productive variety.

what does 'full sun' mean?

Full sun is a minimum of 6-8 hours of direct sun exposure every day between March 21 and September 21. If the sun occurs very early or very late in the day, the sun effectiveness is less than mid-day sun. Full sun is especially important when growing fruit trees, as the trees will be more productive and the fruit ripen earlier in full sun sites.

seaberry (*Hippophae rhamnoides*)

\$15.95

Hardy to Zone 4

Also known as Sea Buckthorn, this large, nitrogen-fixing shrub slowly spreads by suckers. An excellent pollinator and good for anchoring slopes. Drought tolerant. Highest concentration of Vitamin C of any fruit. 1 gl. sized plants

TITAN (*Female*) Very large, flavorful berries are aromatic and bright orange. Seaberry, or Sea Buckthorn, grows best in sandy, well-drained soils, in full sun. Grows to 10'. Needs a male pollinizer to set fruit.

MALE Apollinizer for female Seaberry plants. One male can pollinize up to 8 female plants. A fine ornamental, with gray-green foliage and fuzzy brown flower buds in winter. Grows to 10'.

tea (*Camellia sinensis*)

\$19.95

Hardy to Zone 7

This is the plant from which green and black tea is made. A beautiful broadleaf evergreen shrub, growing to 6'-8', with small, late fall flowers of fragrant white. Sun to partial shade, well-drained, acid soil. This form was selected from the most northern commercial tea plantation in Sochi, Russia. Excellent tea quality. (*pick up only*)

yuzu (*Citrus junos*)

\$27.95

The hardiest true citrus. Will survive short periods below 10°F. Seedy small fruit has lemon like juice, rind strongly flavored like citron. Evergreen to 18°F. Worth trying outside in protected, milder areas of PNW. 1 gl. size

- *Grevillia victorae* - Silk Oak
- *Heptacodium micanooides* - Seven Son Tree

good plants for hedges

plants that tolerate shearing for size control

Conifers

- *Cryptomeria japonica* - Japanese Cedars
- *Thuja plicata* - Western Red Cedar
- *Tsuga sp.* - Hemlocks

Broadleaved Evergreens

- *Arbutus unedo* - Strawberry Tree
- *Choisya* - Mexican Mock Orange
- *Ilex crenata* - Japanese Holly
- *Mahonia aquifolium* - Oregon Grape
- *Myrica californica* - Pacific Wax Myrtle
- *Osmanthus sp.* - Fragrant or Holly - Leafed Osmanthus
- *Pittosporum heterophylla* - Chinese Pittosporum
- *Prunus lusitancia* - Portugal Laurel
- *Rhododendron* - Rhododendron

Other

- *Fargisia sp.* - Clumping Bamboo
- *Phyllostachus sp.* - Running Bamboo

plants for winter wet soils

heavy soils and high water tables are sometimes difficult planting sites

Trees

- *Acer rubrum* - Red Maples
- *Betula sp.* - Birch
- *Metasequoia glyptostroboides* - Dawn Redwood
- *Nyssa sylvatica* - Blackgum or Tupelo
- *Salix sp.* - Willows
- *Chamaecyparis nootkatensis* - Alaskan Cedar
- *Pinus contorta & sylvestris* - Two needled Pines

Shrubs

- *Amelanchier sp.* - Serviceberry
- *Aronia sp.* - Chokeberry
- *Cornus sericea or stolonifera* - Dogwoods
- *Gaultheria shallon* - Salal
- *Hydrangea sp.* - Hydrangeas
- *Sambucus sp.* - Elderberries
- *Physocarpus sp.* - Ninebark
- *Viburnum sp.* - Viburnum (deciduous species)

Fruit Plants

- Mountain Ash hybrids (Shipova)
- Pears . Both European and Asian pears
- Filberts (Hazelnuts)
- Blueberries (some varieties)
- Lingonberry and Cranberry
- Black Currant

ornamental landscape plants

THE CATALOG HAS ONLY A PARTIAL LISTING OF WHAT'S AT THE NURSERY!

ALL PLANTS ARE AVAILABLE FOR PICK-UP AT THE NURSERY. ONLY PLANTS WITH A PRICE AND SIZE CAN BE SHIPPED.

Our goal is to provide you with an extensive listing of well-grown, choice plants, many of which are truly unusual and merit attention in your garden.

USDA HARDINESS ZONES: The USDA Hardiness Zones are based only on AVERAGE ANNUAL MINIMUM TEMPERATURES.

Zone 1	Zone 2	Zone 3	Zone 4	Zone 5	Zone 6	Zone 7	Zone 8	Zone 9	Zone 10
Below -50°F	-50°F to -40°F	-40°F to -30°F	-30°F to -20°F	-20°F to -10°F	-10°F to 0°F	0°F to 10°F	10°F to 20°F	20°F to 30°F	30°F to 40°F

Summer heat and humidity also play a role in plants' adaptability. Your own experience with borderline plants is probably the most valuable way of assessing hardiness, but the chart above is a starting point.

flowering garden trees

Cercis canadensis 'Forest Pansy' - FOREST PANSY Redbud Hardy to Zone 4

Spring flowers of rosy pink line the bare branches before the large heart-shaped leaves emerge shimmering red-purple. Golden fall color and winter branching add interest. Grows to 20'; best with some protection from coldest winter winds. (pick up only)

cornus - flowering dogwoods

Hardy to Zone 5

The flowering dogwoods we carry are resistant to dogwood anthracnose, and perform best in rich, moist soil, in sun to part shade. Flowering dogwoods grow with spreading, layered habit. Their spring flowers are often followed by berry-like fruit that is a favorite of songbirds. They often have good fall color.

- **SATOMI** (*Cornus kousa*) Deep pink flowers bloom in June. Horizontal branching pattern and rich fall color add interest. Slow growing, eventually to 20'-25' in height and spread. (pick up only)

- **EDDIE'S WHITE WONDER** A cross of *Cornus nuttallii* and *Cornus florida*, this dogwood has huge white flowers, blooming in early May. The large foliage develops good fall color. Vigorous growth, mature size of 25'-30'. (pick up only)

- **ROSY TEACUPS** This hybrid of *Cornus kousa* and *Cornus nuttallii* has wide pink flowers with darker edges. Slightly wider than tall, this dogwood should reach 20' in 20+ years. Very disease resistant. 3'-4' Bareroot - \$54.95

- **VENUS** An exciting new cross from Rutgers University, combining the large white flowers of our native Pacific Dogwood, *Cornus nuttallii*, with the disease resistance of the Chinese Dogwood, *Cornus kousa*. 3'-4' Bareroot - \$54.95

magnolias

- **GALAXY** Deep reddish-purple, fragrant flowers bloom late enough to escape most frosts. Galaxy has an upright, vigorous habit, growing to 15' in 10 years, narrower than tall. A 'Great Plants Pick' selection. Hardy to Zone 5 (pick up only)

- **GENIE** Deep maroon-purple blooms open over a long period of spring to

early summer, often with a lighter second bloom in late summer. A compact, pyramidal form makes this magnolia suitable for smaller yards, growing to 10' high, 6'-8' wide in 10+ years. 3'-4' Bareroot - \$54.95

- **GOLD STAR** Star-shaped pale creamy-yellow flowers on a symmetrical tree to 20'. The new growth has beautiful purplish-bronze tints. Hardy to Zone 4. (pick up only)

- **NEW! HONEY TULIP** A new magnolia from Felix and Mark Jury, suitable for smaller gardens, with an upright form to 12'. Golden goblet shaped flowers bloom in early spring. 3'-4' Bareroot - \$54.95

Malus - Scab Resistant Flowering Crabapples for the Pacific Northwest
Hardy to Zone 5

These small garden trees provide spring flowers and ornamental, bird-loved fruit in summer and fall.

They mature at 12'-15' and are tolerant of a variety of soils. We have chosen cultivars that require little or no disease management. They can also act as pollinizers for fruiting apples with the same bloom time. (pick up only)

- **EVERESTE** Midseason blooming, the white flowers are followed by 1½" tart red fruit that can be used for juice. The bright green foliage is very disease resistant.
- **GOLDEN RAINDROPS** The late blooming pink buds open to fragrant white flowers followed by abundant bright golden-yellow, pea-sized fruit. The foliage is lacy, bright green, and very disease resistant. A 'Great Plants Pick' selection.
- **LOUISA** Midseason blooming, the abundant pink flowers are followed by pea-sized, dark red fruit enjoyed by birds. Weeping, spreading form, maturing at 12' high and wide. The foliage is deep green and disease resistant.
- **PRAIRIE FIRE** Late season bloom of intense pink flowers followed by persistent, pea-sized, dark red fruit. The foliage emerges dark purple-red. Very disease resistant.

Stewartias

Small, four-season garden trees that have it all: picturesque branching, summer flowers, fall color, and winter bark interest.

- **monadelph** **ORANGEBARK STEWARTIA** Small, white, camellia-like flowers bloom in June. Wine-red fall color. Beautiful, flaking, reddish tan bark. Slow growing tree, maturing at 15'-20'. *Hardy to Zone 6. (pick up only)*

- **pseudocamellia** **JAPANESE STEWARTIA** This magnificent tree bears scented, white, camellia-like flowers, appearing in July. Fall foliage is subtle shades of red, orange and pink. The bark pattern provides interest year-round. Slow growing, to 25' in many years. *Hardy to Zone 5. 2'-3' Bareroot - \$29.95, larger sizes available for pick up.*
- **rostrata** **PINK STEWARTIA** A beautiful Stewartia, with rose-red buds that open in late June to large pink-flushed white flowers backed by a rose-red calyx. The seed pods are also deep rose-red. Fall color is a deep wine-red. Mature trees develop furrowed ornamental bark. Grows slowly, maturing at 15'. Best performance with ample soil moisture. *Hardy to Zone 6. 1 gl - \$29.95, larger sizes available for pick up.*

Styrax japonicus - Japanese Snowbell

In early summer, white tubular, slightly fragrant flowers hang below the branch-

es. Trunk is slender, often twisted in later years. Leaves are oval and dark green with scalloped edges, turning yellow in fall. Grows slowly to 20' in 20 years. *Hardy to Zone 6. (pick up only)*

how should I amend the soil?

For most plants, the best course is to amend as little as possible. A plant's root system will grow much wider than the visible top of the plant, so amending a planting hole only benefits the plant the first year or two. In the long run, heavily amending the hole may actually keep the plant's roots from moving beyond the hole, stunting the plant.

If your soil is particularly wet or dry, adding organic matter at planting can be a good idea, but working that into a large area before digging the planting hole is more effective. If the soil is very wet, building a low, wide mound on top of the soil works better than amending the hole. Adding organic mulch such as bark, compost or wood chips on an annual basis continues to improve the soil as it breaks down.

learning from our experience

stewartias

Stewartias are one of the most beautiful garden trees for our climate, and can provide year round beauty in the right site with their summer flowers, fall foliage color and lovely winter bark and form. They are not drought tolerant, so in well-drained soils, even established trees need supplemental water. Their best site is a north or east exposure with cool, organic rich soils.

garden trees for foliage & form

acer

Maples are an excellent choice for garden trees. They are deer resistant, drought tolerant once established, and their early spring flowers are a great source of nectar for pollinator species.

Acer crataegifolium 'Veitchii' - Acer crataegifolium 'Veitchii' - VEITCHII Variegated Hawthorn Maple *Hardy to Zone 6*

A small-growing tree for shade to part shade, Veitchii has delicate green leaves streaked with white. The foliage turns golden yellow to red in the fall. Grows to 12' in 10 years, eventually to 18'. A 'Great Plant Picks' selection. (*pick up only*)

Acer pseudoplatanus 'Esk Sunset' - ESKIMO SUNSET Sycamore Maple *Hardy to Zone 4*

A bold, variegated form of Sycamore maple, with bright splashes of pink, maroon, and cream on the green leaves. Grows to 10' in 10 years, eventually reaching 25'-30'. This tree stops traffic. *3'-4' bareroot - \$69.95*

Acer x 'Warrensred' - PACIFIC SUNSET Maple *Hardy to Zone 4*

An excellent medium-sized shade tree. Very glossy dark green leaves develop a mixed fall color of yellows, oranges, and reds. This maple tolerates a wide range of soil conditions. Grows to 20' in 10+ years. A 'Great Plant Picks' selection. (*pick up only*)

Acer griseum - Paperbark Maple *Hardy to Zone 4*

One of the best trees for year-round interest. Leaves are three-lobed, medium green, turning brilliant shades of red and orange in fall. In winter, curls of purple-brown bark peel from its trunk and branches to expose the glistening orange-cinnamon inner bark. Grows to 20'-25'. *4' bareroot - \$36.95*

Betula nigra 'Heritage' - HERITAGE River Birch *Hardy to Zone 4*

A beautiful birch developing cream to salmon brown bark, exfoliating in sheets. Large, dark green leaves develop good

tones of clear yellow in fall. Resistant to birch borer. Tolerant of wet winter soils. A 'Great Plant Picks' selection. *3' bareroot - \$19.95; larger sizes available for pick up.*

Parrotia persica 'Vanessa' - VANESSA Persian Ironwood *Hardy to Zone 4*

A beautiful deciduous tree known for its spectacular fall color. Graceful winter form and spidery winter flowers are also notable. Vanessa was selected for its narrower form; a 10-year-old tree may reach 10'-15' high and 10' wide. A 'Great Plant Picks' selection. (*pick up only*)

is this plant deer resistant?

Deer are a fact of life in many areas of the PNW. Deer resistant plants are usually unpleasant for them to eat; they are thorny, have prickly leaves, smell strongly, or are toxic to them. There are lists of 'deer resistant' plants. Unfortunately, deer do not read, but if you have abundant deer in your area, the plants on these lists will give you the best success without fencing before the plants can grow taller than browsing height. In addition to risk from browsing, young plants are also at risk of damage from antler rubbing.

Cercidiphyllum japonicum - Katsura *Hardy to Zone 5*

An elegant Asian tree, at first columnar, then spreading and horizontally branching with age. Leaves are heart-shaped and emerge lime-green suffused with pink, turning a kaleidoscopic range of yellow, crimson, orange, pink and red in the fall. (*pick up only*)

japanese maples

Every yard or landscape can benefit from the addition of these truly elegant garden trees that are somewhat drought tolerant once established, and not appealing to deer. These selections of *Acer palmatum*, *Acer japonicum*, and *Acer shirasawanum* below are a sample of what is available at the nursery. A more complete list can be found online at www.cloudmountainfarmcenter.org. Zones 5-8

laceleaf japanese maples

- **FAIRY LIGHTS** (*Acer japonicum*) A dwarf form with highly cut leaves, growing to 5' high and wide over time. Very lacy green summer foliage turns brilliant shades of orange to scarlet in fall. 1 gl. - \$49.95; larger sizes available for pick up.
- **GARNET** A vigorous cultivar that forms a beautiful, cascading mound-shaped specimen, this maple is distinguished by its leaf color—the deep orange-red of the gemstone garnet. This color develops best when grown in sun. Grows to 9'. (pick up only)
- **HANA MATOI** A variegated laceleaf maple, with leaves of deep red that emerge splashed in pink and cream. The foliage background changes to deep green in summer shade. Mounded form, growing to 4' high and 5' wide in 10-15 years. 1 gl. - \$49.95; larger sizes available for pick up.
- **ORANGEOLA** Finely cut leaves that emerge orange-red, changing to bronze-green in summer, then a brilliant red-orange in fall. Slow grower, reaching 5'-8' in 10+ years. A 'Great Plant Picks' selection. 1 gl. - \$49.95, larger sizes available for pick up.
- **RED DRAGON** An excellent red laceleaf maple. The color is quite bright, and the plant grows quickly when young to make a beautiful focal point in your garden. 1 gl. - \$49.95; larger sizes available for pick up.
- **SPRING DELIGHT** A beautiful laceleaf Japanese Maple with leaves that emerge peach toned and mature to bright green. The fall colors are a blend of brilliant orange and red. Good sun tolerance. Mounded form, maturing at 6' high. (pick up only)

classic japanese maples

- **DANCING PEACOCK** (*Acer japonicum Aconitifolium*) Also known as the 'Fern Leaf' maple. An upright form of *Acer japonicum*, with finely cut green leaves that turn scarlet in fall.

This vigorous grower can reach 15'-18'. Tolerates full sun or part shade. A 'Great Plant Picks' selection. (pick up only)

- **AKA KAWA HIME** This moderate-sized maple has bright red bark in the winter. Lime green leaves turn golden and orange in autumn. Grows to 6-8 feet in 10 years. (pick up only)
- **AMBER GHOST** Foliage emerges bright red, then fades to pinkish amber, and matures as golden green with strong veining. The fall colors are golden-orange. Grows to 8' in 10 years. (pick up only)
- **AOYAGI** Known to some as the 'Green Coral Bark' Maple, with bright pea-green wood for winter interest. It has light green foliage, turning bright golden in fall. Upright in habit, it grows to 8' in 10+ years, eventually to 15'-18'. Part shade. (pick up only)
- **BENI KAWA** This spectacular maple is prized for its salmon-red bark, brighter than other coral bark maples. The small green leaves are edged in red when they first emerge in spring. Fall color is bright yellow. Upright habit to 10'. 1 gl. - \$49.95; larger sizes available for pick up.
- **EMPEROR** A vigorous, upright cultivar with deep purple-red foliage that holds its color all summer. Grows to 18'-20' in 10+ yrs. A 'Great Plant Picks' selection. (pick up only)
- **HOGYOKU** Upright, spreading form with large green leaves that turn brilliant orange in autumn. Grows to 15' at maturity. Sun tolerant. 1 gl. - \$49.95; larger sizes available for pick up.
- **HUBB'S RED WILLOW** A great willow-leaved cultivar, this small tree is vase-shaped, with long thin leaves of purple-red, turning brighter red in fall. Slow

growing, to 7' in 10 years. Sun tolerant. (pick up only)

- **JUNIHITOYE** (*Acer shirasawanum*) A small tree with very small beautiful, orbicular leaves of a good medium green, held stiffly horizontal on short petioles. Prominent red blooms and samaras. Fall color is golden-yellow. Grows to 11'-15'. (pick up only)
- **KI HACHIJO** A sturdy upright tree, maturing at 10'-12'. Green summer leaves develop a distinctive fall coloration of golden-yellow suffused with rosy overtones, blending into light orange and red. The bark is green, striped white. Sun to part shade. (pick up only)
- **MATSU KAZE** A graceful tree, as wide as tall, with deeply divided spring leaves of purplish red that gradually change in summer to bronze green. The fall color is spectacular orange red. Vigorous habit, grows to 15'. Good in full sun. 1 gl. - \$49.95; larger sizes available for pick up.
- **ORANGE DREAM** Spring foliage emerges peachy orange, gradually changing to bright yellow-green edged in orange. The fall tones are a blend of gold and orange, touched in red. An upright, spreading form, growing to 8' in 10 years, eventually reaching 15' or more. (pick up only)
- **OTAKI** This cultivar of *A. japonicum* has a wider than tall habit, eventually reaching 10'-12'. Large rounded leaves are rich green in summer, turning shades of red, gold, and orange in fall. (pick up only)
- **OSAKAZUKI** An old cultivar, Osakazuki is renowned for its brilliant crimson fall color. The large leaves are green in summer, and very sun tolerant. A moderate sized tree, growing to 10'-12' in 10 years. 1 gl. - \$49.95

- **PURPLE GHOST** Spring leaves emerge deep purple red, with prominent black veins. Grows to 8' tall in 10 years, eventually reaching 12'-15'. Tolerant of full sun. (*pick up only*)
- **SHIGARAMI** Star-shaped leaves emerge edged in red in the spring, becoming a good green in summer. The fall color is a blend of gold, orange, and red. Upright, spreading habit, develops beautiful horizontal branching, grows to 10'. Appreciates afternoon shade. 1 gl. - \$49.95; larger sizes available for pick up.
- **TSUKASA SILHOUETTE** Very narrow habit make this maple suitable for small spaces. Upright habit, eventually to 15'-18' tall by 4'-5' wide. Small green summer leaves turn brilliant red in fall. 1 gl. - \$49.95; larger sizes available for pick up.
- **TSUKUSHIGATA** Star-shaped leaves emerge deep blackish red in spring, with deep red summer color brightening to crimson in fall. The chartreuse samaras (seeds) add contrast. A rounded tree to 10'-15', good in full sun. (*pick up only*)

dwarf japanese maples

- **ARATAMA** A dwarf shrub maple, growing to 3'-4' in 10 years. Bright red new growth, becoming bronze-green in summer. The fall color is bright crimson. Sun tolerant. (*pick up only*)
- **BENI MAIKO** Small, bushy cultivar grown for its brilliant spring of scarlet red. The small, irregularly shaped leaves fade to pinkish-red with green undertones in the summer, often returning to scarlet in the fall. Mature size of 6'. (*pick up only*)
- **JERRE SCHWARZ** A shrubby dwarf maple

with deeply divided leaves that emerge pinkish red. Summer color is a mix of green and red; more red in sun. Grows to 4'-5' high and wide in 10 years. (*pick up only*)

- **KATSURA HIME** Leaves emerge peachy orange, edged in red, then slowly turn to light green. The fall colors are a blend of gold and orange. Aslow-growing, shrubby form, to 6' high and wide in 10 years. Best with afternoon shade. (*pick up only*)
- **MIKAWA YATSUBUSA** A beautiful dwarf with leaves that emerge light green with bright red tips, changing to bright green in summer. The leaves appear to be shingled on the branches. Matures at 5' high and wide. (*pick up only*)
- **MURASAKI KIYOHIME** A wonderful dwarf Japanese Maple. Small green leaves emerge edged in red. In fall, the tree turns golden, touched with orange and red. It grows to 3'-4' high, 6'-8' wide. (*pick up only*)
- **RUSLYN IN THE PINK** This dwarf maple grows to 6' high, 4' wide in 10 years. Grow it for the brilliant hot pink spring foliage, which becomes green in summer. The fall tones are bright crimson-red. (*pick up only*)
- **SHAINA** The leaves emerge a purple-red in spring, and hold that color through the summer. The fall colors are crimson touched in orange. Slow growing to 4'-5', as wide as tall. A 'Great Plant Picks' selection. (*pick up only*)
- **TATTOO** A dwarf shrub form with a spreading habit. Small green leaves have a purple edge in spring and summer. Fall color is yellow to orange. 4' wide by 3' tall in 10 years. 1 gl. - \$49.95; larger sizes available for pick up.
- **VILLA TARANTO** Delicate, airy appearance, but a very sturdy Japanese maple. Distinctive long thin leaves of light green touched in red turn gold and orange in fall. It grows with a narrow upright habit, maturing at 5'-6'. Part shade or sun. (*pick up only*)
- **WINTER'S FLAME** A smaller-growing coral bark maple, maturing at 6' high in 10 years, with brilliant coral-red stems, and pale green leaves turning golden in fall. (*pick up only*)

variegated or unusual foliated maples

- **ARIADNE** A colorful maple through the seasons, with leaves emerging orange-pink with golden veining, maturing to a red with deep purple veining. Fall colors

acer circinatum vine maple

Our native relative of the beautiful Japanese maples. Delicate branching, wonderful fall color. Best in part shade. See our Native section for description of seedling trees; we also carry some wonderful cultivars. *Hardy to Zone 6*

- **BURGUNDY JEWEL** A red-leafed vine maple! Leaves emerge purple red, and hold that color through the summer when planted in sun. Smaller than seedling vine maples, Burgundy Jewel will reach 6'-8' in 10 years. (*pick up only*)
- **DEL'S DWARF** A slow growing form of vine maple, reaching only 3' high in 10 years. The new growth emerges bronze, changing later to deep green, then taking on fall tones of yellow, red, and orange. (*pick up only*)
- **MONROE** This maple has finely cut leaves and an open, airy form. A slow-growing tree, eventually reaching 10' high and wide. Yellow fall tones. Best in part to full shade. A 'Great Plant Picks' selection. (*pick up only*)
- **PACIFIC FIRE** This small tree has brilliant orange-red bark, making it stand out in winter. The green summer leaves take on golden and orange fall tones. Slow-growing to 8'-10' in 10 years. (*pick up only*)
- **SUNNY SISTER** A selected form of vine maple with stunning coral spring color. Slow growing, it should reach 6'-8' in 10+ years. (*pick up only*)

are a blend of flame red with gold and orange. A small spreading habit, to 6'-8' high and wide. *(pick up only)*

- **FIRST GHOST** Spring color of nearly white leaves having deep green veins and red tips. The color holds well into the summer. Fall color is yellow to orange. Grows to 7' high, 4' wide in 10+ years. Best with afternoon shade. *(pick up only)*
- **OLSEN'S FROSTED STRAWBERRY** A colorful Japanese Maple with leaves that emerge strawberry pink, frosted with cream. In sun, the leaves hold their color, and will be veined in green and silver. Upright and vigorous, growing to 8' in 10 years. *(pick up only)*
- **OKUSHIMO** Very narrow, upright vase-shaped habit. The bright green leaves are star shaped with the margins curled upward. Bright orange-gold fall color.

Grows to 15', tolerant of full sun. *(pick up only)*

- **SHISHIGASHIRA Lions Head Maple** This upright maple carries its crinkled, bright green leaves quite close to the branch. Slow growing to 8'-12' high & wide, depending on culture. Fall coloration is striking gold and crimson. Sun tolerant. A 'Great Plant Picks' selection. 1 gl. - \$49.95, larger sizes available for pick up.
- **SISTER GHOST** Spring leaves emerge a pale yellow-green and develop prominent veining (reticulation) as they mature. The fall color is bright golden-yellow. Sister Ghost should reach 7'-8' in 10 years, as wide as tall. Needs some shade. *(pick up only)*
- **UKIGUMO** The "Floating Cloud" Maple, one of the most beautiful of the variegated Japanese Maples. The green leaves

are heavily marked in pink and white, turning pink in fall. Best in part to full shade. Matures at 8'-10'. A 'Great Plant Picks' selection. 1 gl. - \$49.95; larger sizes available for pickup.

- **AUREUM Golden Fullmoon Maple (Acer shirasawanum)** The leaves emerge in spring as round orbs of soft yellow-green. The pale leaves turn shades of yellow and orange through red in fall. Best with part to full shade. Slow growing to 5' in 10 years. 1 gl. - \$49.95; larger sizes available for pickup.
- **AUTUMN MOON Fullmoon Maple (Acer shirasawanum)** Autumn Moon has leaves of light yellow touched in purple. The fall tones tend toward orange to red. Autumn Moon should reach 6'-8' in 10 years. 1 gl. - \$49.95; larger sizes available for pickup.

broadleaf evergreen shrubs

Arbutus unedo 'Compacta' - COMPACTA Strawberry Tree

Evergreen large shrub or small tree, grows to 8' in 10 years. White, bell-like flowers bloom mid-spring, followed by ornamental, strawberry-like fruit. Best in well-drained soil, sun to full shade. Drought tolerant when established. A 'Great Plants Pick' selection. *Hardy to Zone 7. (pick up only)*

Arctostaphylos - Manzanita

Broadleaf evergreen shrubs, found throughout the West. All need good drainage, protection from NE winds. Summer-drought tolerant once established, deer resistant. *Hardy to Zone 7.*

- **HOWARD MCKINN (genus densiflora)** Upright habit, with small glossy green leaves and deep red-brown bark. Grows to 5' wide 6'-8' tall. 1 gl. - \$16.95

- **PACIFIC MIST** A low growing manzanita with blue-gray leaves and reddish twigs. Grows to 2' tall and up to 5' wide. *(pick up only)*

Aucuba japonica 'Rozannie'- ROZANNIE Spotted Laurel

A slow-growing evergreen shrub, reaching 3' high and wide in 10 years. The deep green leaves are adorned with red berries in the fall, even without a male plant nearby. Tolerates sun to deep shade, deer resistant. *Hardy to Zone 6. 1 gl. - \$15.95; larger sizes available for pick up only.*

Azara microphylla - Boxleaf Azara

A highly textural evergreen with tiny, glossy, dark green leaves and minute, yellow, chocolate-scented winter flowers. A narrow upright tree, growing to 10'-15'. Azara enjoys full sun or partial shade, and should be protected from severe NE winds. *Hardy to Zone 7. (pick up only)*

Berberis replicata - Longleaf Evergreen Barberry

A beautiful evergreen barberry with long, narrow leaves. The foliage emerges purple-red in spring, retaining a red blush

through the summer. The early spring flowers are bright orange-yellow. Full sun, average soil. To 6'. *Hardy to Zone 7. 1 gl. - \$15.95, larger sizes available for pick up only.*

Berberis x stenophylla 'Nana' - NANA Dwarf Rosemary Barberry

A compact form of Rosemary Barberry, with tiny, needle-like leaves and red flushed new leaves. Spring flowers are orangey-yellow, followed by blue-black berries. Full sun to light shade, well-drained soil. Grows to 2'-3' high and wide. *Hardy to Zone 6. 1 gl. - \$15.95*

Callistemon ptyoides 'Mt. Kosciusko Form' - Alpine Bottlebrush

Compact growth of narrow, silky foliage. June brings bottlebrush flowers of creamy yellow. Needs well-drained, lean soil, and full sun. Grows to 2'-3' high and wide. *Hardy to Zone 7. (pick up only)*

Calluna vulgaris - Scotch Heather

Small mounded evergreen shrubs grown for their colorful foliage and midsummer flowers. Great for pollinators. *Hardy to Zone 5. 1 gl. - \$10.95*

GOLD HAZE Grows to 12" high, 18" wide. Bright gold foliage and white flowers in August. Sun, average soil. Shear in spring for compactness.

SILVER KNIGHT Grows to 18" high, 18" wide with an upright habit. Soft silvery foliage, lavender blooms in summer.

NEW! Camellia japonica 'Nuccio's Pearl' - NUCCIO'S PEARL Camellia

Fully double flowers are very formal and shade from almost white in the center to deep pink at the outer edges, complementing the deep green foliage. Upright in form and compact in habit, reaching 6' in 10-15 years. *Hardy to Zone 7 (pick up only)*

Camellia sinensis - Tea

This is the plant from which green and black tea is made. A beautiful broadleaf evergreen shrub, growing to 6'-8', with small, late fall flowers of fragrant white. Sun to partial shade, well-drained, acid soil. This form was selected from the most northern commercial tea plantation in Sochi, Russia. Excellent tea quality and productive. *Hardy to Zone 7. (pick up only)*

Ceanothus thyrsifolia -California Wild Lilac

Evergreen shrubs for sun, tolerant of drought and salt spray, loved by pollinators, and deer resistant. Best in fast draining soil with limited summer water. *Hardy to Zone 7.*

- **NEW! COOL BLUE** Variegated evergreen foliage is highlighted early summer with pale blue flowers. Smaller growing than Victoria, Cool Blue will grow to 3'-4' wide and 5'-6' tall in 10 years. A 'Sunset Garden Collection' plant. *1 gl. - \$15.95*

- **VICTORIA** Proven for our climate, Victoria grows quickly to 6' high & wide, and can be sheared for more compact form. Late spring flowers are masses of dark blue. *Available late spring 2020.*

Cistus x 'Grayswood Pink' - GRAYSWOOD PINK Rockrose

Soft gray foliage topped by medium-pink

flowers blooming in June. Spreading, mounded form to 2'-3'. Full sun, well-drained soil. Deer resistant! *Hardy to Zone 7. 1 gl. - \$15.95*

Choisya ternata - Mexican Mock Orange

Evergreen shrubs good as informal hedges or in mixed shrub borders. Fragrant white flowers in early to mid-spring. Sun to part shade. All varieties grow to 6'-8' high and wide, and can be kept smaller through pruning. Deer resistant. We offer 3 cultivars. *Hardy to Zone 7. 1 gl. - \$15.95; larger sizes available for pick up only.*

- **ternata** Bright green foliage.
- **SUNDANCE** New foliage emerges golden yellow. In sun, the leaves hold the yellow color; in shade they fade to lime green.
- **AZTEC PEARL** Deeply cut, rich green foliage.

Cotoneaster lacteus - Parney Cotoneaster

Evergreen shrub, grows to 6'-8', with elegant arching branches. Subtle white June flowers are followed by showy red berries. For full sun or light shade, well-drained soil. Best with some protection from strong winter winds. *Hardy to Zone 7. (pick up only)*

Daphne odora 'Mae-jima' - MAE-JIMA Variegated Winter Daphne

The evergreen leaves are edged in creamy gold. Pink buds open to intensely fragrant light pink flowers in late February through March. Best in afternoon shade, protected from cold winter winds. Grows to 4' high, 5' wide. Well-drained soil is essential. *Hardy to Zone 7. 1 gl. - \$24.95*

Daphne tangutica - Evergreen Daphne

A dense, evergreen shrub, growing to 3' high and 4' wide in 10 years. Fragrant orchid pink flowers open from purple buds, and are followed by orange-red berries, loved by birds (but toxic to humans). Well drained soil. *Hardy to Zone 7. 1 gl. - \$19.95*

Daphne x rollsdorfii - Hybrid Daphne

Compact evergreen daphnes that originated as crosses of two alpine species, *D. collina* x *D. petraea*. Glossy dark green leaves topped by fragrant, deep orchid-

pink flowers in early May. Easy in sun or partial shade and sharply drained soils. *Hardy to Zone 6. 1 gl. - \$19.95*

- **ARNOLD CIHLARZ** Wider than tall. Fragrant, deep orchid-pink flowers in early May.

- **LAWRENCE CROCKER** Grows to 12" high and wide, with intensely fragrant, deep pink flowers.

Daphne x thauma 'Reginald Farrer'- REGINALD FARRER Dwarf Daphne

Very slow-growing evergreen daphne, grows to 6" high and 10" wide, covered with white-throated, fragrant flowers in spring and summer. Well-drained soil. *Hardy to Zone 6. 1 gl. - \$19.95*

Daphne x 'Perfume Princess' - PERFUME PRINCESS Daphne

Pink buds open to intensely fragrant light pink flowers in late winter into spring, with occasional flowers in summer. Best in sun to afternoon shade, protected from cold winter winds. Grows to 4' high and 3' wide. *Hardy to Zone 7. 1 gl. - \$24.95*

Erica x darlyensis - Winter Blooming Heather

- **EVAGOLD** Grow this one for the foliage. Light green new growth shifts to yellow in summer, becoming brighter golden-bronze in fall. Magenta flowers December through April. Grows to 12"-18" high, spreads to 20"-25" wide. Sun, average soil. *Hardy to Zone 7. 4" - \$7.95*

- **KRAMERS RED** Magenta flowers December through April over dark green foliage. Great winter source of pollen for bees. Grows to 12"-18" high, spreads to 20"-25" wide. Sun, average soil. A 'Great Plants Pick' selection. *1 gl. - \$10.95*

Hebe

Evergreen shrubs for sun to part shade, and well-drained soil. Protect from cold winter wind. *Hardy to Zone 7-8. 1 gl. - \$15.95*

- **albicans RED EDGE** Red-edged, blue-green leaves on an evergreen shrub growing to 18". The midsummer flowers are lilac, fading to white.

- **NEW! pimeleoides QUICKSILVER** Tiny silver leaves on arching black branches give this small evergreen a distinctive look. Smoky pink flowers bloom early summer. Grows to 1' high, 2' wide.

- **BLUE MIST** Evergreen shrub to 3' high and wide. Pale blue flowers in spring fade to white.

Laurel nobilis - Bay Laurel

This evergreen shrub can reach 10' in protected areas. Culinary leaves with white flowers, followed by purple-black berries. Well-drained soil. Sun-part shade. A 'Great Plants Pick' selection. *Hardy to Zone 8. 1 gl. - \$15.95*

Lonicera crassifolia - Creeping Evergreen Honeysuckle

A groundcover honeysuckle with rounded, evergreen leaves. Tiny, cream-colored flowers bloom in late spring and are followed by ornamental blue berries. Full sun to partial shade, moist, organic rich soil. Our plant has easily survived temperatures of -5°F. *Hardy to Zone 7.* 4" plants \$6.95, limited quantities.

Lonicera nitida 'Red Tip' - RED TIP Box Honeysuckle

Evergreen shrub with erect, leafy branches and dark green shiny leaves. New growth is bronzy red and turning bronze in winter. Fragrant June flowers followed by translucent blue berries. Grows to 6' unpruned; can be sheared lower. *Hardy to Zone 6.* 1 gl. - \$13.95; larger sizes available for pick up only.

Lonicera pileata - Privet Honeysuckle

Evergreen shrub with low spreading, stiff branches, dark green leaves. Tiny fragrant cream flowers, followed by translucent purple berries. Will grow to 3'-4' high and wide; can be sheared lower. Sun or light shade, with most soils. A 'Great Plant Picks' selection. *Hardy to Zone 5.* 1 gl. - \$13.95; larger sizes available for pick up.

Mahonia eurybracteata 'Soft Caress' - SOFT CARESS Mahonia

This hybrid mahonia has soft evergreen leaves, topped with spikes of cheerful yellow flowers fall through winter. A mounded form growing to 3' high and wide in time. Best in part sun to full shade, with rich moist soil, and protected from severe NE winter winds. *Hardy to Zone 7.* 1 gl. - \$19.95, larger sizes available for pick up only.

Mahonia x media -Hybrid Mahonia

Bold evergreen shrubs growing to 6'-10' in time. Vertical stems hold horizontal branches with spikes of fragrant yellow flowers in winter. Overwintering hummingbirds love the flowers. Deer resistant! A 'Great Plant Picks' selection. *Hardy to Zone 7.* (pick up only)

Pieris japonica - Pieris

Evergreen shrubs with early spring bell-like flowers and colorful new foliage. Deer resistant! *Hardy to Zone 6*

- MOUNTAIN FIRE White flowers followed by intensely red new foliage that holds its color into summer. Grows to 4'-5'. 2 gl. - \$29.95
- PRELUDE Dwarf form, beautiful, deep green foliage with pink buds open to sprays of white bell-like flowers followed by new pinkish-red foliage. Slow-growing to 2' high and wide. (pick up only)

Prostanthera cuneata - Alpine Bush Mint

Evergreen shrub with aromatic, deep green, tiny foliage. Grows to 2'-3' high and wide. The summer flowers are white tubular bells with purplish throats. Drought tolerant and deer resistant. *Hardy to Zone 7.* (pick up only)

Sarcococca- Sweet Box

Winter- to early spring-blooming evergreen shrubs for shade to part shade, rich soil, average water.

- confusa Glossy evergreen leaves adorned by early spring flowers of fragrant white, followed by black fruit. Slow growing to 4'-6' high and wide. *Hardy to Zone 6.* 1 gl - \$16.95, larger sizes for pick up.
- hookeriana humilis Intensely fragrant winter bloom. Grows to 18"-24" high and wide, spreads by stolons. The flowers are followed by black fruits. A 'Great Plant Picks' selection. *Hardy to Zone 6.* 2 gl - \$29.95
- ruscifolia Slow-growing to 3', fragrant white flowers in late winter, red berries. *Hardy to Zone 7.* 1 gl - \$16.95

Vaccinium glaucoalbum - Evergreen Asian Blueberry

Slow-growing, blue-green mound of large, rounded foliage. Pink flowers in late spring followed by edible blue-black berries. Sun to part shade. *Hardy to Zone (7)8.* (pick up only)

Vaccinium ovatum - see Natives section

Viburnum tinus 'Lisa Rosa' - LISA ROSA Shades of Pink Viburnum

Evergreen shrub growing to 4'-6' high and wide in time. Bright-pink buds open to blush-pink flowers blooming in spring against shiny dark green leaves. Best in full sun to dappled shade. Deer resistant! *Hardy to Zone 7.* 2 gl. - \$29.95

- ARTHUR MENZIES Flowers of fragrant yellow December-January are followed by blue-gray berries.
- CHARITY Slightly larger growing than Arthur Menzies, with November-December flowers.

Osmanthus x burkwoodii - Fragrant Osmanthus

Good hedge plant; grows to 6'-8' high, easily pruned. Intensely fragrant white flowers in early spring. Sun or shade, tolerant of most soils. *Hardy to Zone 7.* (pick up only)

Osmanthus heterophyllus - Japanese False Holly

Evergreen shrubs with holly-like leaves and tiny, fragrant fall flowers. Sun to shade, tolerant of many soils, deer resistant. *Hardy to Zone 7.* (pick up only)

- GOSHIKI Cream-splashed green foliage, emerging in spring with pinkish-bronze tints. Slow growing to 4' high and wide. A 'Great Plant Picks' selection.
- PURPUREA Purple-flushed new growth

with holly-like, purple-tinged leaves. Forms a rounded shrub, slowly growing to 6'-7'. Small, fragrant flowers bloom in the fall.

conifers

Conifers add year round interest to the garden with a variety of color, texture and form. We give approximate sizes and growth rates for conifers in our maritime climate; they may grow differently outside the Pacific Northwest.

How big will it get? This is a common question from conifer shoppers. There is no hard and fast answer, because conifers continue to grow as long as they are alive - and they can live a very long time. Size can also vary due to cultural conditions.

Category	Growth per Year	Average size at 10 Years
Miniature	Less than 1"	Less than 1' in height or width
Dwarf	1" to 6"	1' to 6' in height or width
Intermediate	6"-12"	6'- 12' in height or width
Large	Greater than 12"	Greater than 12' in height or width

Abies balsamea 'Nana' - NANA Dwarf Balsam Fir Hardy to Zone 3

(Dwarf) Deep green needles densely clothe this wider-than-tall conifer. Slow growing, it will reach 15" high, 18" wide as a ten year old plant. 1 gl. - \$19.95

Abies koreana - Korean Fir Hardy to Zone 5

Korean Fir has many cultivars, from miniature to large in size, from silvery to blue-green to deep green. All thrive in sun.

- **BLAUER ESKIMO (Miniature)** A flattened globe form of Korean Fir with blue-green needles. Grows less than 2" per year. Best color in full sun. 1 gl. - \$34.95; larger sizes available for pick up.
- **CIS (Miniature)** Dark green needles on a dense, bushy form of Korean fir. Grows 1" to 2" per year. 1 gl. - \$34.95; larger sizes available for pick up.
- **OBERON (Dwarf)** Irregular, mounding shape, growing 2"-3" per year. Named for Shakespeare's King of Fairyland, in honor of its regal but dwarf form. 10-year size 18" high, 24" wide. (pick up only)

- **SILBERPERL (Miniature)** A very dwarf, flattened-ball-shaped conifer with green needles that curve upward and show their silvery undersides. Grows ½" per year. (pick up only)
- **SILBER MAVERS (Miniature)** A very dwarf, globe-shaped conifer with dark green needles that curve upward to show their silvery undersides. Grows ½" per year. A great rockery or trough conifer. Full sun, well-drained soil. (pick up only)
- **STARKERS DWARF (Dwarf)** Dense, irregular, upright form with deep green needles. Begins as almost prostrate, then gradually becomes upright with age. Grows 4"-6" per year. 1 gl. - \$24.95; larger sizes available for pick up.

Abies normanniana 'Munsterland' Hardy to Zone 4

(Dwarf) Deep green needles on a flat-topped miniature conifer. Grows 1"-2" per year; a 10-year-old plant could reach 10" tall by 24" wide. Full sun. 2 gl. - \$39.95

Abies pinsapo 'Aurea' - AUREA Golden Spanish Pin Fir Hardy to Zone 6

(Intermediate) Very striking conifer with golden yellow tips on blue-gray needles. Narrow and irregular form; it will grow 6"-8" per year. Best in full sun and well-drained soil. 2 gl. - \$39.95

Abies procera 'Blau Hexe' - BLAU HEXE Noble Fir Hardy to Zone 6

(Miniature) A tiny globe of powder-blue needles. Grows less than 1" per year. A treasure for the rock garden. 2gl. - \$69.95

Araucaria araucana - Monkey Puzzle Tree Hardy to Zone 7

(Large) A unique and interesting South-American conifer that is fast-growing once established, growing more than 12" per year. Huge cones add interest. Prefers full sun to partial shade, and deep,

moist, well-drained soil. 2 gl. - \$56.95

Cedrus atlantica 'Saphire Nymph' - SAPHIRE NYMPH Cedar Hardy to Zone 6

(Miniature) Low growing, irregular miniature Atlas Cedar. Blue-gray needles, wonderful in a rock garden, only grows about 1"-2" per year. Best in full sun. (pick up only)

Cedrus deodara - Deodar Cedar Hardy to Zone 6

True deodar cedars are conifers that tolerate sun, drought, and deer pressure. They also tolerate most soil types, and have few pest problems.

- **DEEP COVE (Intermediate)** A compact, pyramidal form of deodar cedar that grows 8"-10" per year. The new growth is creamy white, with older needles of blue-green. (pick up only)
- **DEVINELY BLUE (Dwarf)** Dense blue foliage on a mounded form, growing 3"-6" per year. It eventually forms a leader, becoming a broad cone. (pick up only)
- **FEELING BLUE (Dwarf)** Powder-blue foliage shines on this prostrate cedar. It grows 3"-4" per year. 1 gl. - \$19.95; larger sizes available for pick up.
- **LIME GLOW (Intermediate)** Semi-dwarf in size, with a mounded pyramidal habit and lime green needles that make this cedar a standout. Growing 6"-8" per year, becoming more upright with age. 1 gl. - \$29.95

Chamaecyparis lawsoniana 'Blue Surprise' - BLUE SURPRISE Lawson Cypress Hardy to Zone 6

(Intermediate) Slow growing, columnar conifer of powder blue foliage. Grows 6"-8" per year. Full sun to part shade, well-drained, moist soil. Intolerant of wet soil and high winter water tables. (pick up only)

Chamaecyparis obtusa - Hinoki Cypress Hardy to Zone 5

Many forms of this lovely conifer are available.

- **BLUE FEATHERS (Dwarf)** An upright form growing 4" per year, with soft, blue-gray juvenile foliage. (pick up only)
- **NEW! FERNSPRAY GOLD (Intermediate)** A compact, upright form of hinoki cypress with arching sprays of golden fern-like foliage. Grows 6"-8" per year, forming a dense pyramid. Best color in full sun, will be more greenish in shade. Prefers moist, well drained soil. 1 gl - \$21.95
- **MARIESII (Dwarf)** An upright, irregular dwarf form of Hinoki Cypress with sprays of deep green foliage flecked in cream. Grows 3"-4" per year. Best in partial shade. (pick up only)
- **NANA LUTEA (Dwarf)** This popular dwarf Hinoki Cypress has cupped, lemon-yellow over dark green sprays of foliage. Slow growing, only 3"-4" per year. (pick up only)

Chamaecyparis pisifera 'Tsukomo' - TSUKOMO Sawara False Cypress Hardy to Zone 4

(Miniature) A very dwarf mound of dense, soft green foliage. Grows less than 1" per year. Excellent for rock gardens and troughs. 1 gl. - \$19.95; larger sizes available for pick up.

Cryptomeria japonica - Japanese Cedar Hardy to Zone 6

Elegant conifers with lacy foliage, good for sun or partial shade. Fairly soil-tolerant, not attractive to deer.

- **BLACK DRAGON (Dwarf)** Slow-growing form of Japanese Cedar, growing 4"-6" per year. The dense foliage is dark green, with lime-green new growth. (pick up only)
- **ELEGANS (Intermediate)** Soft, gray-green summer foliage turns bronze-purple in winter. Grows 6"-8" per year. (pick up only)
- **SEKKAN SUGI (Intermediate)** Moderately slow growing, variegated form of Japanese Cedar, growing about 8" per year. The dense foliage emerges lemon-yellow. 1 gl. - \$19.95; larger sizes available for pick up.

Juniperus communis - Common Juniper Hardy to Zone 5

- **BERKSHIRE (Miniature)** A slow-growing, low mound of deep green and silver needles. The plant takes on deep purple tones in winter. Grows 1"-2" per year. (pick up only)
- **EFFUSA (Dwarf)** A slow growing, prostrate mat of dark green and silvery needles. Can grow 3"-6" per year. 1 gl. - \$15.95; larger sizes available for pick up.
- **COMPRESSA (Dwarf)** A tight column of gray-green foliage, perfect as an exclamation point in a rock garden. Grows 3"-6" per year. 1 gl. - \$19.95; larger sizes available for pick up.
- **GOLD CONE (Intermediate)** Columnar conifer with finely textured bright yellow foliage. Grows 6"-8" per year. 1 gl. - \$19.95

Juniperus squamata 'Blue Star' - BLUE STAR Himalayan Juniper Hardy to Zone 5

(Dwarf) Slow-growing, mounded conifer, only growing 2"-3" per year. Steely blue needles have best color in full sun. 1 gl. - \$19.95

Picea abies - Norway Spruce Hardy to Zone 3

- **LITTLE GEM (Miniature)** Slow-growing mounded conifer, growing 3"-4" per year. The lime-green new growth contrasts strongly with the older, dark green needles. (pick up only)
- **REPENS (Dwarf)** Much wider than tall, this low-growing spruce holds its branches in horizontal layers. Grows

about 3"-4" per year, to 1'-2' high and 4'-6' wide in 10-15 years. 1 gl. - \$19.95; larger sizes available for pick up.

Picea sitchensis 'Silverzwerg' - SILVERZWERG Dwarf Sitka Spruce Hardy to Zone 6

(Dwarf) A dwarf form of our native Sitka spruce. Silvery needles on a rounded globe form, growing 1"-2" per year. Full sun, average soil. 1 gl. - \$29.95

Pinus banksiana 'Schoodic' - SCHOODIC Jack Pine Hardy to Zone 3

(Dwarf) Beautiful dwarf prostrate pine, growing 2"-4" per year. Irregular, twisting, horizontal branches with a bonsai-like form. Full sun, well-drained soil. 2 gl. - \$34.95

Pinus mugo 'Carsten's' - CARSTEN'S GOLD Mugo Pine Hardy to Zone 2

(Dwarf) A dense, dwarf form of mugo pine, wider than tall, growing 2"-4" per year. Lime-green in summer, becoming rich golden yellow in winter. (pick up only)

Pinus parviflora 'Tani Mano Uki' - TANI MANO UKI Japanese White Pine Hardy to Zone 4

(Dwarf) A dense dwarf conifer with white new growth and pink buds. Older needles are deep blue-green. Does not burn in full sun once established. (pick up only)

Pinus pumila 'Dwarf Blue' - Dwarf Stone Pine Hardy to Zone 4

(Dwarf) Slow, mounded pine with blue needles. Irregular spreading habit, growing 3"-4" per year. (pick up only)

Pinus sylvestris - Scots Pine Hardy to Zone 3

- **ALBYNS (Intermediate)** One of the best groundcover pines, low and creeping, with deep blue-green needles. The color is retained even in winter. Grows 6"-8" per year. (pick up only)
- **HILLSIDE CREEPER (Intermediate)** Another great creeping groundcover pine with bright green needles, turning almost chartreuse in winter. Grows 8"-12" per year. (pick up only)

Pinus thunbergii 'Thunderhead' - THUNDERHEAD Japanese Black Pine Hardy to Zone 5

(Intermediate) Dark green needles contrast with white candles (growth tips) in winter. Its compact irregular form is wider than tall. Grows 6"-8" per year. (pick up only)

Sequoiadendron giganteum - Giant Redwood Hardy to Zone 6

(Large) A fast-growing conifer, growing 18"-24" per year, eventually to 200'+. Prefers deep, moist soil, well-drained, but will tolerate some winter wetness. Full sun or partial shade. 1 gl. - \$19.95

Taxus baccata - Yew Hardy to Zone 5

- **FASTIGIATA (Dwarf)** Very upright conifer, growing 6"-8" per year; can reach 15'-20' high and 4' wide. Deep green needles. A 'Great Plant Picks' selection. 1 gl. - \$19.95; larger sizes available for pick up.
- **FASTIGIATAAUREA (Dwarf)** Very upright conifer, growing 6"-8" per year; old plants can reach 15'-20' high and 4' wide. Gold-tipped green needles. (pick up only)

Tuja plicata - Western Red Cedar Hardy to Zone 5

Pacific Northwest native conifer, fast-growing, tolerant of most soils, some shade, and wind. We offer several forms.

- **EXCELSA (Large)** 12"-15" per year. Holds onto its low branches. Good hedging plant. 1 gl. - \$12.95, larger sizes available for pick up.
- **SALMON RIDGE (Large)** Our selection of the Northwest native Western Red Cedar. The original tree is on the North Fork of the Nooksack River, and has a strongly weeping form, much like an Alaskan Cedar. Fast growing, 8"-10" per year. (pick up only)
- **VIRESCENS (Large)** Almost columnar when young, broadening with age. Holds deep green color through the winter. Grows 10"-12" per year. Good hedging plant. 1 gl. - \$12.95, larger sizes available for pick up.

- **ZEBRINA (Large)** Bright yellow foliage striped deep green. Pyramidal form, grows 12"-15" per year. (pick up only)

Tsuga canadensis - Canadian Hemlock Hardy to Zone 4

Small needles, many forms; tolerant of sun or shade.

- **BENNET (Dwarf)** A semi-prostrate conifer for sun or shade. Grows 4"-6" per year. 1 gl. - \$19.95; larger sizes available for pick up.

- **BETTY ROSE (Dwarf)** A dwarf, mounded form, slightly wider than tall, with white-tipped branches. Grows 2"-3" per year. Sun to partial shade. (pick up only)
- **COLE'S PROSTRATE (Dwarf)** A wonderful hemlock for the rockery, grows 3"-4" per year, perfectly flat to the ground. (pick up only)
- **EVERITT GOLDEN (Dwarf)** Spreading at first, and then becoming upright, this golden foliaged hemlock is a very colorful accent plant. Grows 4"-6" per year. (pick up only)
- **FREMDII (Dwarf)** A moderate-growing hemlock, taller than wide, growing 4" or more per year. Ascending branches have dense, deep green needles. 1 gl. - \$19.95; larger sizes available for pick up.
- **GENEVA (Intermediate)** A compact, upright little tree that is happy in full sun or partial shade. Irregular form growing 8"-10" per year. (pick up only)
- **LITTLE JOE (Miniature)** Deep green needles and a tight, irregular, bun-shaped form, growing less than 1" per year. Excellent in the shaded rockery. 1 gl. - \$21.95
- **NANA GRACILIS (Dwarf)** Mounded form, growing 3"-4" per year. Small green needles have a silvery cast. 2 gl. - \$29.95

Tsuga heterophylla 'Iron Springs' - IRON SPRINGS Western Hemlock Hardy to Zone 5-9

(Intermediate) A slow growing, semi-dwarf form of our native Western Hemlock. Tiny dark green needles grow on short, stiff, lateral branches. Narrow upright form. Grows 8"-10" per year. 1 gl. - \$21.95

Tsuga mertensiana - Mountain Hemlock Hardy to Zone 5

- **BUMP'S BLUE (Intermediate)** Selected form of PNW native conifer, with very blue needles. Broad pyramidal shape, grows 6"-8" per year. 1 gl. - \$24.95
- **DWARF BLUE (Dwarf)** An unknown cultivar of our native Mountain Hemlock with silvery-blue needles. Mounded at first, eventually forming a leader. Grows 3"-4" per year; our 12 year old plant is 3' high and wide. 1 gl. - \$24.95
- **ELIZABETH (Dwarf)** A slow growing, dwarf form of Mountain Hemlock, with silvery-blue needles. Almost prostrate habit, growing 3"-4" per year. Best color in full sun. The original plant was found on Mt. Rainier about 1940. 1 gl. - \$24.95
- **SHERWOOD COMPACT (Dwarf)** A compact and dainty dwarf with silvery-blue needles. Offers marvelous additional color and form to the rock garden. Prefers full sun in well-drained soil. Grows 4"-6" per year. 1 gl. - \$24.95
- **SEEDLING (Intermediate)** See the Native Plants Section

YOU PICK • FRESH BLUEBERRIES
9 varieties available
 On the corner of Hwy 9 and S. Pass Rd, Nooksack, WA

climbing vines

Clematis

• **armandii APPLE BLOSSOM** This vigorous, evergreen clematis vine, growing to 15'-20' or more. Very fragrant pink flushed, white flowers bloom early to mid-spring. Full sun to part shade, in rich, moist, well-drained soil. Can be pruned yearly, immediately after flowering. Protect from NE winter winds. A 'Great Plant Picks' selection. Hardy to Zone 7. 1 gl. - \$21.95

• **montana ELIZABETH** Vigorous vine covered in late spring with a profusion of 3-inch pink flowers. This cultivar is the most fragrant of all the montanas, with a sweet vanilla scent. The new foliage emerges bronze, and changes to green in early summer. Can eventually reach 40'. Blooms on new wood; prune immediately after flowering. Hardy to Zone 5. 1 gl. - \$16.95, larger sizes available for pick up.

• **viticella POLISH SPIRITS** Prolific summer blooms of deep purple midsummer into fall. Can reach 10'-12'. Prune in late fall or early spring. Established plants can be cut back to 12". Hardy to Zone 4. (pick up only)

• **ROOGUCHI** Hummer magnet! Nodding, dark purple-blue flowers. 1 1/2"-2" long, 1" in diameter. Blooms June-September. This variety is a hybrid of *Cl. integrifolia* x *Cl. reticulata*. Ht. 5-6'. Prune to lowest strong buds each spring. Hardy to Zone 4. (pick up only)

Hydrangea anomala petiolaris - Climbing Hydrangea

The foliage and rich coppery brown branch pattern are enough to recommend

this plant. Flat white lace cap flowers. Sun to shade, moist soil. Clings without a trellis. A 'Great Plant Picks' selection. Hardy to Zone 4. 1 gl. - \$19.95

Lonicera periclymenum var. serotina - Late Dutch Honeysuckle

Moderately vigorous vine grows to 15'. Long lasting display of bicolor creamy white and reddish-pink flowers that are extremely fragrant. The deciduous foliage is green suffused with purple. Hardy to Zone 5. 1 gl. - \$19.95

perennials and herbs

Aquilegia bertolonii - Blue Alpine Columbine Hardy to Zone 5

A petite columbine for the rock garden, growing only 6" tall. Large, deep blue flowers bloom in mid-spring. Full sun, well-drained soil. Will self-seed. 4" - \$3.95

Armeria juniperifolia - Dwarf Sea Thrift Hardy to Zone 2

Evergreen grass-like mound, to 3", topped early spring by globes of pink flowers on short stems. Shear for summer rebloom. Sun, well-drained soil. Good rocky plant. 4" - \$3.50

Bergenia 'Bressingham Ruby'- BRESSINGHAM RUBY Bergenia Hardy to Zone 2

Evergreen perennial to 14", winter color of deep maroon. Rose red flowers in spring. Summer foliage is green. Best in sun to part shade, moist soils. 7 gl. - \$10.95

Blechnum penna-marina - Alpine Water Fern Hardy to Zone 6

Evergreen fronds emerge bronze tinged, can grow 4"-6" high, slowly spreading to form mats. Best in

full to partial shade in rich, moist humusy soil. A great groundcover. 6" pots - \$11.95

Delosperma cooperii - Ice Plant

Hardy evergreen succulents for full sun- great in rockeries. Grows to 4" high, spreads to 10" wide. Starry flowers bloom over a long period in summer. Will not tolerate winter wet. Deer resistant. 4" - \$4.50

• **DESERT MOONSTONE** Pure white star shaped flowers.

• **DESERT TOPAZ** Flowers with petals that are orange around the perimeter, white on the inside.

Epimedium x perr. 'Frohnleiten' - FROHNLEITEN Barrenwort Hardy to Zone 4

Evergreen foliage marbled in bronze, with bright yellow spring flowers. Slowly spreads to form large clumps. Part shade, average soil. 4" - \$7.95, 6" - \$12.95

Fuchsia magellanica - Hardy Fuchsia Hardy to Zone 7

Hardy fuchsias are champion summer bloomers, flowering from late June through the first hard frost. Loved by hummingbirds. 1 gl - \$10.95

• **ELEANOR RAWLINGS** Flowers have long red-purple sepals and violet corollas, blooming June till frost. Bold rounded foliage on a low growing plant, to 2' high, 3' wide.

• **LECHLADE MAGICIAN** A vigorous, upright hardy fuchsia with lavender flowers accented by purple corolla. Does well in part shade to full sun. Can reach 4'-5' when established.

• **MOLINAE** Small, narrow, delicate, palest pink flowers are prolific and long blooming on this upright hardy shrub. Cut back early spring. Part shade, moist soil. To 4'.

- **NEW! TOM THUMB** A very hardy small fuchsia with upright habit, growing to 2.5' high and wide. From late spring to frost, small flowers bloom, with deep purple and tubes and mauve pink corollas.

Helleborus x 'SP Elly' - ELLY Lenten Rose *Hardy to Zone 5*

Rich purple-pink double flowers with deeper red spotting. Evergreen foliage can be cut back before blooming to highlight the flowers. Part sun to shade. Grows 12"-18". Deer resistant! *Available only for pick up.*

Heuchera x villosa 'Carnival Silver Streak' - SILVER STREAK Coral Bells *Hardy to Zone 5*

The large, lobed leaves are dark green with bright silver markings, forming a mound to 12" wide. Sprays of small flowers appear in late spring. Sun to part shade. Partially evergreen. *6" pot - \$10.95*

Iris x pacifica - LOT A FLOWERS FORM Pacific Coast Iris *Hardy to Zone 7*

A form of Pacific Coast Iris, found growing at Lot A Flowers in Fairhaven (Bellingham). Evergreen foliage to 12"-18", topped in May by beautiful bicolored maroon and pink irises. Sun to part shade. Drought tolerant once established. *6" - 10.95*

Lavendula species - Lavender *Hardy to Zone 5*

Evergreen shrubby herbs with fragrant gray foliage and wands of flowers in summer. Drought tolerant. Full sun, well-drained soil. *6" pot - \$9.95*

- **angustifolium HICDCOTE** Deep purple-blue spikes bloom over a long period in summer. Fragrant foliage is soft gray-green. Full sun, well-drained soil. To 12" high & wide.

- **intermedia GROSSO** Long, deep purple-blue spikes bloom over a long period in summer. Very fragrant. Grows to 24" high and wide.

Lewisia cotyledon - Lewisia *Hardy to Zone 3*

Evergreen rosettes bloom in shades of white or pink to salmon. Very good

drainage in sun to partial shade; best with gravel mulch. *4" pot - \$5.95*

Miscanthus sinensis 'Morning Light' - MORNING LIGHT Maiden Grass *Hardy to Zone 5*

Beautiful grass with fine textured silvery striped leaves that grow in an upright arching clump to 60". The autumn flower plumes rise above the foliage. Full sun, well-drained soil. *6" pot - \$10.95*

Nepeta x faassenii 'Walker's Low' - WALKERS LOW Catmint *Hardy to Zone 3*

Small gray green fragrant leaves form wide mounds 12" high, 18" wide. Masses of lavender-blue flowers are borne on spikes early summer. Cut back spent flowers for repeat bloom. Full sun, well-drained soil. Loved by bumblebees. Deer resistant and drought tolerant. *1 gl - \$9.95*

Penstemons - Beardtongues

Penstemons are a group of plants we have come to love. There are varieties of penstemons native to much of the West, and hybrids that are very showy in the garden. They love full sun and well-drained soils; most are drought tolerant once established. Their bright, tubular bell-shaped flowers attract bumblebees and hummingbirds. Check our native section for more selections.

- **CANDY WINE** Growing to 3' tall & 2' wide, this vigorous penstemon blooms mid-summer to frost with coral-red tubular bells that attract hummingbirds and bumblebees. Full sun, average to dry soil. *6" pot - \$10.95*

- **PIKES PEAK PURPLE** *Hardy to Zone 5* Bushy clump growing to 10"-12" wide, with spikes of violet purple flowers to 12"-16" high. Full sun to part shade, gritty, well-drained soil. Will self-seed if happy. *6" pot - \$10.95*

Perovskia atriplicifolia - Russian Sage *Hardy to Zone 4*

Tall spikes of smoky blue flowers bloom mid to late summer above silvery foliage. Grows to 3'-4' high, 2'-3' wide. Drought tolerant plant for full sun, deer resistant. *6" pot - \$10.95*

Phygellus x rectus - Cape Fuchsia *Hardy to Zone 7*

A deciduous to semi-evergreen shrub, often grown as a perennial. These drought tolerant plants bloom from mid-summer almost until frost, and are very attractive to hummingbirds and unattractive to deer. Spreads by suckers. *6" pot - \$10.95*

- **CHERRY RIPE** Bright red tubular flowers with yellow throats bloom on plants growing 2'-3' tall.

- **CORAL PRINCESS** Salmon colored tubular flowers with a hint of soft yellow in the throats in summer.

- **MOONRAKER** Tubular flowers of pale yellow bloom atop 4'-5' plants in summer.

Polystichum polyblepharum - Japanese Tassel Fern *Hardy to Zone 5*

Semi-evergreen to evergreen fern to 2'. Shiny dark green fronds contrast with the new growth that is paler in color. Shade, moist soil. *Available only for pick up*

Polystichum setiferum - Alaska Fern *Hardy to Zone 6*

A beautiful evergreen fern for moist shade. Grows to 2' high and wide, with very lacy divided foliage. Cut back early spring to renew the foliage. A 'Great Plants Pick'. *1 gl - \$11.95*

Origanum x 'Kent Beauty' - KENT BEAUTY Flowering Oregano

Hardy to Zone 6

Wonderful rock garden oregano, blooming mid-summer till frost, with large bracted flowers of shrimp pink. Full sun, sharply drained soil, low water use. *4" pot - \$4.95*

Salvia x sylvestris 'Caradonna' - CARADONNA Flowering Sage

Hardy to Zone 5

Violet blue flowers throughout summer (and fall if cut back monthly). This variety is noted for its striking dark stems. Full sun, average soil, 18"-24". *6" pot - \$10.95*

Salvia officinalis - Culinary Sage *Hardy to Zone 4*

Low growing, gray-leaved edible sage. This seed grown strain has wonderful flavor. Spikes of blue flowers early summer. Sun, well-drained soil. Drought tolerant, deer resistant, and pollinator attractant. *6" pot - \$10.95*

Sedum telephium 'Autumn Joy' - AUTUMN JOY Stonecrop

Hardy to Zone 2

Upright, fleshy perennial to 30". Blue-green succulent leaves grow in tall clumps, and are topped in late summer by flat flower clusters of deep coppery-pink, that age to brownish seedheads. Attractive to bees and butterflies. *6" pot - \$9.95*

deciduous shrubs

Amelanchier grandiflora - AUTUMN BRILLIANCE Serviceberry
Hardy to Zone 4

A spreading shrub with graceful branch patterns, prolific spring bloom and excellent, reliable fall color. Berries are attractive to birds. Tolerant of most soils. (*pick up only*)

Azalea Hardy to Zone 5

Deciduous shrubs that bear bright, fragrant flowers in late spring. Good in sun or shade and average soil. (*pick up only*)

- **GIBRALTER** Brilliant orange-flushed red flowers held in a tight ball truss. Compact habit, maturing at 4'-5', with good mildew resistance.

- **LEMON LIGHTS** Matures at 4'. Soft, lemon-yellow flowers are lightly fragrant. The deep green foliage is very disease resistant. Fall colors range from red to purple.

- **ROSY LIGHTS** Very hardy, deciduous azalea. Matures at 4' high. Dark, rosy pink blossoms are sweetly fragrant. The foliage is disease resistant, and takes on fall tones of gold and orange.

- **WHITE LIGHTS** Grows to 4'. Ruffled, white blossoms have a yellow band on the upper lobe and are sweetly fragrant. The foliage is disease resistant, with good fall tones of gold and orange.

Berberis thunbergii 'Helmond Pillar'
- **HELMOND PILLAR** Barberry
Hardy to Zone 5

Deciduous, columnar shrub growing to 6' high, 1' wide, with deep purple foliage. Tiny yellow flowers are fragrant, red berries in fall as the leaf color intensifies to crimson. Deer leave it alone! Tolerant of most soils, and drought tolerant. (*pick up only*)

Callicarpa bodneri 'Profusion'
- **PROFUSION** Beautyberry
Hardy to Zone 5

Upright deciduous shrub, growing to 8'-10'. Pale pink midsummer flowers are followed in fall by deep violet fruit.

Fall foliage of red and maroon. A 'Great Plant Picks' selection.

1 gl. - \$12.95; larger sizes available for pick up.

Cornus sericea 'Blood Orange' -
BLOOD ORANGE Dogwood
Hardy to Zone 4

Colorful twigs are yellow at the base and grade into red at the tips. Striking for winter color! Grows to 4'-5'. Green summer foliage turns shades of yellow to red in fall. Tolerant of both wet and dry soil. Prune out oldest wood to maintain twig color. (*pick up only*)

Corylopsis pauciflora - Buttercup
Winterhazel Hardy to Zone 6

Deciduous shrub with horizontal branching, to 4'-6' in height and width. Late winter blooms of soft yellow are quite fragrant. The green leaves emerge after the bloom. Sun to full shade, moist, well-drained soil. A 'Great Plants Pick' selection. 1 gl. - \$16.95

Cotinus x 'Grace' - **GRACE** Smoke
Bush Hardy to Zone 5

Large deciduous shrubs, eventually to 15' but can be kept smaller with pruning. Colorful foliage and airy flower plumes are attractive. Somewhat deer and drought resistant. Large oval leaves emerge steel blue and darken to deep purple in summer. The foliage turns brilliant orange and red in fall. Large plumes of pink flowers borne in summer. (*pick up only*)

Daphne x translantica 'Blafra' -
ETERNAL FRAGRANCE Daphne
Hardy to Zone 6

Semi-evergreen to deciduous daphne growing to 3' high and wide. In spring, the sweetly fragrant flowers begin, pink flushed white, and continue sporadically through the summer. Sun to light shade, well-drained soil. 1 gl. - \$24.95

New! Diervilla rivularis - Bush
Honeysuckle Hardy to Zone 4

Compact deciduous shrubs grown for their colorful foliage and long season

of honeysuckle-like flowers that attract bees and butterflies. Drought and deer resistant. 1 gl. - \$19.95, larger sizes available for pick up.

- **HONEYBEE** Low growing with brilliant yellow foliage. Yellow flowers most of the summer. Grows to 3' tall, 4' wide.

- **TROJABLACK** Foliage emerges burgundy-bronze and matures to deep green in summer. A long summer season of bright yellow honeysuckle-like flowers. Grows to 4' tall, 5' wide.

Disanthus cercidifolium - Redbud
Hazel Hardy to Zone 5

Glossy blue-green, heart-shaped leaves turn glorious muted shades of yellow, orange, and wine-red in autumn. One of the best shrubs for autumn foliage color in shade. Spidery red flowers bloom in October and November. Grows to 8' over time. (*pick up only*)

Edgeworthia chrysantha
'Grandiflora' - **Paperbush**
Hardy to Zone 7

Very fragrant yellow, daphne-like flowers bloom over a long period in February and March. Tropical-looking foliage on striking stems give the plant an exotic summer look. Best flowering in a warm site. (*pick up only*)

Enkianthus campanulatus - Redvein
Enkianthus Hardy to Zone 6

A beautiful shrub grown for its spectacular fall colors of yellow, orange, and red. Bell-like May flowers are large, creamy-bronze with red veining. Picturesque in habit, it may reach 8' in time. Sun or partial shade, and rich, acidic soil. (*pick up only*)

Forsythia x 'Northern Gold' -
NORTHERN GOLD Forsythia
Hardy to Zone 3

Deciduous shrub with arching upright branches that bear golden yellow bell-

shaped flowers in late winter-early spring. Grows to 8'. Best in full sun, tolerant of most soils, usually ignored by deer. (*pick up only*)

Fothergilla gardenii - Dwarf Fothergilla *Hardy to Zone 5*

Honey-scented, white bottlebrush flowers bloom in April on picturesque bare branches. The green summer foliage turns brilliant shades of orange to crimson in fall. Grows to 4' high, slowly spreads to 5'-6' wide. Deer resistant. Sun to partial shade; moist acidic soil. (*pick up only*)

Hamamelis intermedia - Budded Witch Hazel *Hardy to Zone 5*

Witch Hazels stand in a class of their own in late winter and early spring. These vigorous vase-shaped shrubs have brilliant colored blossoms blooming January through March. Excellent fall colors are a striking mix of red, orange, and yellows. These are truly multi-season highlight plants in the landscape. Grows to 15' with equal spread. Deer tend to leave them alone. (*pick up only*)

- **ARNOLD'S PROMISE** Winter flowers are spidery, bright yellow, and fragrant. The bold, rounded leaves turn shades of gold & orange in fall. A 'Great Plant Picks' selection.
- **DIANE** Winter flowers are spidery, deep orange-red. The bold, rounded leaves turn shades of gold and orange in fall.

hydrangeas

A group of woody shrubs unequalled for summer bloom. Most will tolerate full sun in the Northwest if summer irrigated, and all will thrive in shade to partial shade.

Hydrangea angustipetala - Fragrant Hydrangea *Hardy to Zone 7*

This deciduous hydrangea was introduced by Dan Hinkley. Blooming early for a hydrangea, in mid-spring, the chartreuse touched white lace cap flowers are sweetly fragrant. Grows to 4' high and wide. Part shade, moist soil. *1 gl. - \$16.95*

Hydrangea macrophylla - Bigleaf Hydrangea *Hardy to Zone 5*

- **NIKKO BLUE** A classic hydrangea cultivar, growing to 6' high and up to 8' wide. Long summer bloom of blue mophead flowers, great as cut flowers. (*pick up only*)
- **KINGFISHER ('Teller Eisvogel')** The lacecap flowers are formed from large petals; pH sensitive; blue or violet in acidic soils or fuchsia-pink in alkaline soils. Grows to 4'-6'. *1 gl. - \$16.95*
- **PINK BEAUTY** Deciduous shrub grows to 4'-6'. Summer bloom of dark pink lacecaps over large foliage touched in pink. Good fall foliage color of deep wine red. *1 gl. - \$16.95*
- **WINNING EDGE** Dwarf variety maturing at 18". Soft rose pink, mophead type flowers. (*pick up only*)

Hydrangea quercifolia - Oakleaf Hydrangea *Hardy to Zone 4*

- **AMETHYST** Flowers bloom white, then age to a deep rose pink. Great maroon fall foliage adds another season of interest. Upright, compact habit; grows to 5' high, 4' wide. *1 gl. - \$16.95*
- **SIKE'S DWARF** Conical flowers of ivory white appear late summer into fall. Oak-shaped leaves turn burgundy-red in autumn. Grows to 3' high and wide. *1 gl. - \$16.95*

Potentilla fruticosa - Shrubby Cinquefoil *Hardy to Zone 2*

Selected forms of a native shrub with silvery leaves. Both drought and deer resistant. (*pick up only*)

- **KATHERINE DYKES** The cheerful lemon-yellow flowers bloom midsummer through to frost. Grows to 2'-3' high and wide.
- **SNOWFLAKE** The pure white flowers bloom midsummer through to frost. To 3' high and wide.

- **TANGERINE** Orange-yellow flowers bloom midsummer on. Grows to 2'-3' high and wide.

Ribes sanguineum 'King Edward' - KING EDWARD Flowering Currant *Hardy to Zone 6*

Selected form of our native flowering currant with deep reddish pink flowers, a little later than the species. Compact form to 6'. Early spring blooms welcome hummingbirds, are followed by berries favored by songbirds. Partial sun, well-drained soils, deer resistant. A 'Great Plants Pick' selection.

(*pick up only*)

Rosa rugosa hybrids - Rugosa Rose *Hardy to Zone 4*

Hybrid rugosa roses are tough performers in the garden, with long bloom seasons and good drought tolerance. (*pick up only*)

- **BLANC DOUBLE DE COUBERT** An heirloom rose with almost continual bloom spring and summer of pure white, very fragrant, semi-double flowers. 4'-5' in height.
- **LINDA CAMPBELL** Upright growing hybrid rugosa with lightly fragrant, deep red flowers blooming throughout the summer. Grows to 6'.

Salix - Willows

Shrubby willows are useful for their tolerance of winter wet soils. Their late winter to early spring blooms are an important food source for pollinating insects when little else is in bloom.

- **magnifica MAGNOLIA LEAFED WILLOW** A large shrub or small tree that will fool its viewers. Large, magnolia-like leaves are bluish-green. The flowers are 6" long, upright rose-gray catkins. Grows to 15'. *Hardy to Zone 6. (pick up only)*
- **melanostachys BLACK PUSSY WILLOW** Compact deciduous shrub blooms in late winter with large, glossy black catkins adorned by deep red anthers. Grows to 6'-8'. *Hardy to Zone 4. 1 gl. - \$10.95; larger sizes available for pick up.*
- **sachalinensis SEKKA (JAPANESE FANTAIL WILLOW)** A vigorous deciduous shrub grown for its curved and twisting, fasciated (flattened) stems that are dotted in late

winter with small, silvery catkins. Can be cut to the ground annually to control size. *Hardy to Zone 5. 1 gl. - \$10.95*

New! Sambucus racemosa 'Goldenlocks' - GOLDENLOCKS Elderberry Hardy to Zone 3

A selected form of our native red elderberry. White flowers bloom from late summer to early fall, followed by inedible red berries. Bright gold, finely dissected foliage. Dwarf habit grows to 6' tall, 4' wide. Best in full sun to partial shade, with rich, moist, well-drained soil. (*pick up only*)

New! Syringa vulgaris 'Tiny Dancer' - TINY DANCER French Lilac Hardy to Zone 4

A compact form of common lilac, with violet-purple buds opening to fragrant lavender flowers. Grows to 5' high, 4' wide over time. Best in sun, with rich, moist soil. (*pick up only*)

Viburnums Hardy to Zone 6

Deciduous shrubs grown for form and

flower. All are good in part shade to sun, average soils. Most are deer resistant.

- *carlesii* AURORA Deep pink buds opening in mid-spring to intensely fragrant pale pink to white flowers. Fall foliage color is a blend of orange and red. Grows to 6'. (*pick up only*)

- *bodnantense* DAWN Winter blooms of fragrant pink flowers, often from December through March. Highly textured foliage with good fall color. Grows to

8'-10'. A 'Great Plant Picks' selection. 1 gl. - \$14.95

- *farreri* NANA Winter blooms of fragrant pink flowers. Often in bloom from December through March. Highly textured foliage with good fall color. Grows to 3'-4'. Best in full sun to partial shade, with moist soil. 1 gl. - \$14.95

- *plicatum* SUMMER SNOWFLAKE Grown for its beautiful horizontal branching form. Late spring into summer, the branches are lined with white lacecap flowers, followed by red berries. Grows to 6'-8" high, 10' wide. Best in full sun to partial shade, with moist soil. (*pick up only*)

Weigela florida 'Wine and Roses' - WINE AND ROSES Weigela Hardy to Zone 4

Deciduous shrub with deep burgundy leaves that are highlighted by the prolific deep pink flowers in late spring. Vase-shaped shrub, growing to 4'-5' high and wide. Sun to part shade, tolerant of many soil types. 1 gl. - \$12.95, larger sizes available for pick up.

rhododendrons

After the name of each rhody, we have listed a series of numbers. First is the size of the plant in 10 years. Then, hardiness ratings in degrees Fahrenheit. Bloom times in the Northwest:

VE: Jan-April 1 E: April 1-May 1
EM: May 1-May 15 M: May 15-June 1
ML: June 1-June 15 L: June 15- July 1
VL: July 1- July 31

Our descriptions also include American Rhododendron Society ratings when possible. The three numbers (i.e. 3/4/4) rate the flower, plant, and performance in the garden. A "5" is an excellent, but uncommon, rating. "3" ratings are common, but a lower rating does not mean the plant is not worth growing. '-/-/' indicates a rhododendron that has not yet been rated by the ARS.

species rhodies

R. fortunei EMMA AND MAY 6' -15° F M 4/4

A selected form of a beautiful species, with fragrant, shell-

pink flowers and reddish highlights on the new foliage. Blooms earlier than seedling forms. 2 gl. size - \$32.95

R. makinoi 3' -10° F ML 3-4/4

Superb foliage is long and narrow, coated with white to fawn felting when new, becoming bright green when mature. The flowers are light pink, carried in tight trusses. (*pick up only*)

R. rex var. ficolacteum 5'-6' 0° F EM 3/4

Huge deep green leaves with buff to brown felted undersides adorn this tree-like rhody. The bell-shaped flowers are white spotted in crimson, and held in large trusses. Needs wind protection. Hardest of the large-leafed rhodies. (*pick up only*)

R. roxieanum 3' -10° F EM 3/5

Very compact, slow-growing rhody with superb foliage. The deep green leaves are heavily covered with cinnamon indumentum. The bell-shaped flowers are white to pale pink. (*pick up only*)

R. yakushmanum KEN JANECK 3'

-25° F EM 5/5

Compact growth. New narrow leaves are felted in white, making all the 'yaks' stand out. Mature leaves are medium green with undersides of tan indumentum. Pink buds open to white flowers. (*pick up only*)

hybrid rhododendrons

BLUE BARON 3' -10° F M -/-

Upright, tight growth of glossy small leaves. Prolific deep blue with a hint of purple flowers mid-season. Sun tolerant. (*pick up only*)

BOB'S BLUE 3' 0° F EM -/-

Small, dark green leaves take on maroon tones in winter when grown in sun. Pro-

lific, light violet flowers held in trusses of 3-5. 2 gl. size - \$32.95

DREAMLAND 4' -10°F M -/-

A prolific bloomer with pale pink flowers bordered by deeper pink edges. Attractive, deep green foliage covers this wider-than-tall plant. 2 gl. size - \$32.95

EARL MURRAY 5' 0°F M -/-

Salmon-orange flowers with pale throats bloom in spherical trusses. An upright, well-branched plant with matte green foliage. (pick up only)

EVERRED 2' EM 0°F -/-

Incredible foliage plant, with deep purplish black rounded foliage on a wider-than-tall shrub. Dark red flowers are bell shaped in loose trusses. 2 gl. size - \$32.95, larger sizes available for pick up.

FANTASTICA 3' -5°F ML 4-5/4

Strong rose pink flowers, fading to white in the throat, are carried above long, elliptical leaves with furry silver undersides. 2 gl. size - \$32.95

FRED G. PESTE 3' 0°F ML 4/4

Cardinal-red flowers have deep maroon throats and deep red spotting on the upper flower lobes. Narrow, deep green leaves have light indumentum on the undersides. 2 gl. size - \$32.95

GOLDEN TORCH 4' 5°F ML 4/4/4

Warm pink buds open to soft yellow flowers. The deep green foliage has a touch of light brown indumentum on the undersides. 2 gl. size - \$32.95

KODIAK 4' -5°F M -/-

Incredible foliage of deep green with furry brown undersides. Pure white flowers. Needs PM shade. (pick up only)

LEMON DREAM 3' 0°F M -/-

Prolific, soft yellow flowers with wavy edges and are sometimes double. The deep green foliage is rounded in shape and emerges with cinnamon indumentum on the undersides. A 'Great Plant Picks' selection. 2 gl. size - \$32.95

NANCY EVANS 3' 5°F M 5/4

A rounded, dense plant with beautiful foliage. Orange-red buds open to amber yellow, then fade to golden yellow. 2 gl. size - \$32.95

PATTY BEE 18" -10°F EM 5/4-5/4-5

A great dwarf rhododendron. Clear yellow flowers are carried in loose trusses above small green foliage. Very heat and sun tolerant. A Warren Berg hybrid. 2 gl. size - \$32.95

PERCY WISEMAN 3' -10°F M 4/4

Dark green foliage covers this wider-than-tall, compact plant. Trusses of soft peach-yellow flowers gently fade to white. (pick up only)

PINK PINWHEELS 3' 0°F M -/-

Bright pink-edged white flowers cover this new hybrid by Frank Fujioka. The foliage is a nice deep green and densely covers this compact plant. (pick up only)

PINK SNOWFLAKE 2' 0°F E 4/4

Glossy green leaves cover this small mounded plant. Red buds open in early spring to pastel pink flowers. The new foliage is touched in red. (pick up only)

PJM COMPACTA 4' -25°F E 4/4

Small rounded leaves are green in summer, mahogany-red in winter. The early flowers are lavender pink. The 'Compacta' form of PJM has a vigorous, compact habit, and is prolific in flower. Sun tolerant. (pick up only)

POLARNACHT 3' -10°F ML -/-

Deep green leaves cover this wider-than-tall plant. The frilled, funnel-shaped flowers are deep purple-red with a deep red spotted dorsal lobe, held in trusses of 12-14 flowers. 2 gl. size - \$32.95

POMEGRANATE SPLASHED 5' 5°F M -/-/-

A new hybrid with stunning flowers of purplish red-edged white, with a spotted red dorsal flare. A strong growing plant with excellent foliage, from breeder Frank Fujioka of Whidbey Island. 2 gl. size - \$32.95

RED WOOD 5' -20°F ML -/-

Glossy foliage is held on deep red stems. Large trusses of pale pink flowers mature to pure white. An outstanding foliage plant that tolerates full sun. 1 gl. - \$17.95; larger sizes available for pick up.

SEAVIEW SUNSET 30" 0°F E -/-

Glossy, olive green leaves are adorned by light yellow flowers opening from red-orange buds. The outside of the flowers are a deep salmon color. 2 gl. size - \$32.95

SILVER SKIES 3' -10°F M 4/4

A great 'yak' hybrid, with long, narrow leaves of deep green, backed by silvery indumentum. The deep pink buds open to pale pink flowers with deep pink margins and stripes on the outsides of the petals. 2 gl. size - \$32.95, larger sizes available for pick up.

SONGBIRD 3' -5°F E-EM 3-4/4

Bright purple-blue flowers seem to glow when in bloom. Glossy green foliage and a compact, dense habit compliment the flowers. Sun tolerant. 2 gl. size - \$32.95

SURREY HEATH 3' 0°F M 4/4

Narrow, dusty green foliage covers this tightly growing plant. The flowers are warm pink with darker edges, large and ruffled, and bloom for an incredibly long time. (pick up only)

TAPESTRY 4' -20°F M -/-

Low growing, wider-than-tall plant densely covered with forest green foliage. Ball-shaped trusses of deep lavender flowers are accented by darker eyes. 2 gl. size - \$32.95, larger sizes available for pick up.

TRESSA McMURRY 3' 0°F ML -/-

Narrow leaves densely cover the plant, and are a foil for the tight trusses of small, lavender pink flowers. Sun tolerant. (pick up only)

WHISPERING ROSE 3' 0°F EM 4/4

A very compact, mounded plant with round green leaves, accented by red buds. The bell-like flowers are deep rose-pink. 1 gl. - \$19.95; larger sizes available for pick up.

YAKU SUNRISE 3' -10°F M 4/4

Rose pink flowers with darker coloring on the reverse. Leaves are dark green, emerging coated in silvery indumentum. The dense plant is wider than tall. (pick up only)

pacific northwest natives

trees

Acer circinatum - Vine Maple Hardy to Zone 6

Slow growing, to 20' at maturity. Light green leaves turn brilliant shades of yellow, orange, and red in the fall. 12"-18" Bareroot - \$14.95; larger sizes available for pick up.

Callitropsis nootkatensis - GLAUCA PENDULA Alaskan Yellow Cedar Hardy to Zone 4

(*Chamaecyparis nootkatensis*) Native to the Pacific Northwest and up the coast into Alaska. Graceful form with bluish, slightly weeping foliage; slow growing to 30'. Grows to 8'-10' in 10 years. (pick up only)

Quercus garryana - Oregon White Oak Hardy to Zone 7

Fast growing oak, matures at 50'-60' with rounded crown. Bronze-red to bright red fall color. Full sun, well-drained soil. 1 gl. - \$16.95; larger sizes available for pick up.

Rhamnus purshiana - Cascara Hardy to Zone 6

Small, upright tree with large, glossy green leaves that develop good fall tones most years. Tolerant of wet or dry sites but prefers some shade. (pick up only)

Tsuga mertensiana - Mountain Hemlock Hardy to Zone 6

The rather small needles are blue-green with a silver cast. Perfect for a small na-

tive garden. Very hardy, no problem with cold winds. 6' in 10 years. (pick up only)

shrubs

Amelanchier alnifolia - Western Serviceberry Hardy to Zone 3

Deciduous shrub with prolific white flowers in late spring. Large, blueberry-like fruits ripen in late June to early July. Matures at 10'-12'. Tolerant of most soils. Best fruiting in full sun, also good in partial shade. 12"-18" Bareroot - \$14.95

Gaultheria shallon - Salal Hardy to Zone 3

Evergreen groundcover. Grows in sun or shade, prefers rich, organic, moist soil. Grows to 2'-3' high. Spreads by underground runners. 1 gl. - \$12.95

Holodiscus discolor - Ocean Spray Hardy to Zone 6

PNW native deciduous shrub, with June flowers of creamy white. Grows to 10'-12'.

Best in sun to part shade. Tolerant of most soil types, and tolerates drought once established. 18"-30" Bareroot - \$14.95

Lonicera involucrata - Black Twinberry Hardy to Zone 4

PNW native shrub with yellow spring flowers followed by black berries. Grows to 8'. A good shrub for moist to wet soils, sun to part shade. Excellent bird habitat plant. 1 gl. - \$10.95

Mahonia aquifolium - Tall Oregon Grape Hardy to Zone 6

Evergreen shrub with early spring yellow flowers followed by blue berries. Grows to 6'-8' and slowly spreads by underground runners. 1 gl. - \$12.95

Morella californica - Pacific Wax Myrtle Hardy to Zone 7

(Previously 'Myrica') Coastal area native evergreen shrub. In sheltered areas, grows to 20'-30'; much smaller in windy sites. Drought, salt, and deer tolerant. A 'Great Plant Picks' selection. Available May 2020.

What sets the nursery at Cloud Mountain Farm Center apart?

WE PROPAGATE AND GROW PLANTS right here onsite. Propagation methods include growing plants from cuttings, grafting fruit trees, conifers and Japanese maples, and even growing plants from seed.

We plant both fruit and ornamental plants in trials so we can see how they perform in our climate. Our Goodwin Road site, where the nursery is located, tends to run 10° F warmer in summer than nearby Bellingham, and often we can be 10° F colder during the coldest winter weather. We get both strong south winds off the water, and the famous Northeaster Fraser valley outflow winds. Those weather variables really test many plants.

Beyond aesthetic beauty or fruit flavor, we evaluate new fruit and ornamental plants so we can be confident they will work in local gardens. We look for disease resistance, drought tolerance, hardiness, benefits like habitat enhancement and pollinator friendliness, and deer resistance.

Paxstima myrsinites - Oregon Box
Hardy to Zone 3

Small evergreen shrub, growing to 3' high and wide. Tolerant of sun or shade, best in well-drained soil. Drought tolerant once established. 1 gl. - \$15.95

Physocarpus capitatus - Western Nine Bark
Hardy to Zone 3

Deciduous shrub, whose arching stems to 8' are treasured for their peeling brown and tan bark. The white flower clusters appear in late spring, followed by seed heads that attract songbirds. Not fussy about light or soil. 1 gl. - \$11.95; larger sizes available for pick up.

Oemleria cerasiformis - Indian Plum
Hardy to Zone 6

A mid-sized deciduous native shrub that signals the end of winter with clusters of small drooping white flowers, followed by

a small bittersweet plum-like fruit that is attractive to wildlife. Best in part shade. Can reach 15' in time. (*pick up only*)

Sambucus nigra ssp. caerulea - Blue Elderberry
Hardy to Zone 5

Native deciduous shrub, with an arching form growing to 10'+. Blue berries ripen in late summer, much loved by birds, great for jams and wine. Likes sun and well-drained soils. (*pick up only*)

Vaccinium ovatum - Evergreen Huckleberry
Hardy to Zone 6

Produces a multitude of white or pinkish bell-shaped blossoms in April and May, and tasty blue-black berries in August and September. Prefers a shady environment but can take full sun in cooler areas. Erect shrub grows 8'-10' in partial shade, 4'-5' in full sun. Prefers acid soil and mulched roots. 1 gl. - \$16.95

perennials

Blechnum spicant - Deer Fern
Hardy to Zone 5

Pacific Northwest Native fern with evergreen fronds that grow 18"-30" high and wide. Best in full to part shade in rich, moist soil. 1 gl. - \$11.95

Dicentra formosa - Pacific Bleeding Heart
Hardy to Zone 4

Finely cut foliage is topped early to late

spring with pinkish purple, drooping flowers. Spreads by rhizomes. Prefers shade to part shade. 4" pots - \$3.95

Dryas octapetala - Mountain Avens
Hardy to Zone 3

Native to Western mountain ranges, this low-growing, mat-forming, semi-evergreen plant blooms in mid-spring with striking single white flowers followed by silky seed heads. Prefers full sun and well-drained soils. 4" pots - \$4.95

Fragaria chiloensis - Coastal Strawberry
Hardy to Zone 5

Northwest native strawberry, with semi-evergreen, glossy, leathery leaves. White flowers are sometimes followed by tiny strawberries. Full sun, well-drained soils. 4" pots - \$3.95

Fritillaria pudica - Yellow Bells
Hardy to Zone 5

Common on the east side of the Cascades, occasionally found west of the crest. Very early spring bloom of yellow bells on stems 4"-8" tall. The yellow bells age to red. Best in gravelly soils, sun to light shade. Drought tolerant. 4" pots - \$8.95

Oxalis oregana - Oregon Woodland Sorrel
Hardy to Zone 3

A spreading groundcover perennial. Three heart-shaped leaflets make the shamrock leaf form; pale pink to white flowers bloom above the foliage. Shade to partial shade, drought tolerant once established. 1 gl. - \$9.95

Penstemon davidsonii - David's Penstemon
Hardy to Zone 4

Evergreen mat-forming shrubby penstemon, with trumpet-shaped pink to violet flowers in spring. Grows to 3"-4" high, spreads to 12" wide. Full sun, well-drained soil. Loved by hummingbirds and bumblebees. 4" pot - \$4.95

Polystichum minutum - Sword Fern
Hardy to Zone 6

Pacific Northwest native evergreen fern, growing to 2'-3'. Prefers shade to part shade, but can take considerable sun once established. Tolerant of dry shade under large conifers. 1 gl. - \$11.95
