USAGE:

This product should be used as part of a complete nutrient management program. True Organic fertilizers are designed and manufactured as soil amendments and should be thoroughly mixed into the soil. True Organic Products have been processed in a manner that eliminates human pathogens. However, in order to further limit any risk, all users shall avoid fertilizer contact with the edible portion of the plant. Consult your agronomist or a True Organic Products Fertility Specialist for specific agronomic recommendations.

DERIVED FROM:

Poultry Manure, Feather Meal and Meat & Bone Meal.

DESCRIPTION:

True 4-4-2 is a homogeneous fertilizer specially formulated for organic fruit and vegetable crop production.

Information regarding the contents and levels of metals in this product is available on the internet at <http://www.aapfco.org/metals.html>

All True Organic Products, Inc. fertilizers are formulated to meet the requirements of the USDA National Organic Program. Certified organic producers should obtain approval from their certifier prior to use of any fertilizer.

Controlled Document# ODOC 1-05

APPLICATION DIRECTIONS

Broadcast - Broadcast up to one ton per acre using conventional spreading equipment. Fertilizer is most efficient if tilled in immediately after application.

Side Banding – Side-band at the rate of one-half ton per acre in most soils. In sandy or poor soils, this rate can be increased.

Vegetable Gardens

- **Broadcasting:** For each 100 sq. ft. of garden area, till or rake in 8-12 lbs. of 4-4-2 fertilizer prior to planting. After planting, top dress seed rows or plants with a thin layer (1 lb. per 10 foot furrow) of fertilizer.
- **Row Crops:** For every 10 foot furrow till or rake in 1-2 lbs. of fertilizer to a depth of 2-4 inches. Cover furrow with a thin layer of soil and plant vegetable seeds at the recommended depth. After planting, top dress seed rows or plants with a thin layer (1 lb. per 10 foot furrow or 1/4 cup around base of plant) of fertilizer.
- **For enhanced yields, 4-5 weeks prior to harvest, top dress plants again with a thin layer (1 lb. per 10 foot furrow).**
- **After any application of fertilizer for your vegetable garden, be sure to thoroughly water the treated area to activate the release of nutrients.**

Shrubs & Trees

- **Planting new shrubs & trees:** Sprinkle 1/4 - 1/2 lb. of 4-4-2 fertilizer in the bottom of the hole and cover with 2-3 inches of soil. For every 1 foot of shrub or tree height, mix 1/4- 1/2 lb. of fertilizer with soil used to fill and pack around the root ball.
- **Established shrubs & trees:** For each 1 foot of shrub or tree height or width, top dress 1/4- 1/2 lb. of fertilizer out to the foliage drip line.
- **After any application of fertilizer for your shrubs or trees, be sure to thoroughly water the treated area to activate the release of nutrients.**
